Financing a green transition and reaching net zero: The role of Long Term Strategies on market developments

11 November 2021, 15:00 – 16:15 (GMT)
Side Event Room 2 - Strangford Lough (Armadillo)

Overview

Long-term strategies (LTSs) are key to meeting the Paris Agreement objectives as they set out how countries will achieve net zero emissions by a target date, whilst considering climate resilience, just transition and sustainable development.

This event will explore:

- How to address the challenge of mobilizing investment and finance to support clean transitions, with a focus on the emerging and developing world
- How LTSs can help inform market developments for the private sector
- The tools available to countries, companies and organizations to set LTSs and measure the alignment of their investments with the Paris goals.
