

The energy efficiency indicators template(s)

Thomas ELGHOZI | International Energy Agency

Joint APEC-IEA Training Workshop on End-use Energy Consumption Data, June 28th 2021

Gathering data for energy efficiency indicators

IEA and APEC templates

Same structure: one sector per tab, covering subsectors and energy products over the period 1990-2019

Same subsectors
(from ISIC rev. 4) and
buildings end uses

Same energy products
and transport fuels

Similar energy unit

Similar contextual information

APEC and IEA share the same way of gathering data, through a questionnaire collecting end-use consumption in energy units, over four main sectors, and macro-economic and activity data

The use of **very similar templates**,
based on the **same methodology**,
allows for easy **country comparison** and **data sharing** between organisations.
