

Foreword.....	3
Acknowledgements.....	5
Executive summary	17

Part A: Overview and context 25

1 Overview and key findings 27

Introduction	28
1.1 Which way is the energy world heading?.....	30
1.1.1 Electricity and emerging market and developing economies drive energy expansion.....	30
1.1.2 Do we still see demand peaks for coal, oil and natural gas?	32
1.1.3 How do market balances play out in the different scenarios?	33
1.2 What are the implications of the IEA scenarios for the global climate and for COP30?.....	36
1.2.1 Outlook for emissions in the exploratory scenarios	36
1.2.2 Temperature outcomes in the scenarios.....	37
1.2.3 A limited overshoot pathway to 1.5 °C has slipped out of reach, but avoiding the worst climate outcomes is still possible	38
1.2.4 What can be done to get on track?	39
1.3 How are the drivers of future global energy demand different from those in the past?	42
1.3.1 Drivers of energy growth of the past are not the ones of tomorrow	42
1.3.2 Engines of demand growth are shifting across fuels and regions	43
1.3.3 Clean technologies and emerging sectors redefine growth	45
1.4 What does the Age of Electricity mean for affordability?	47
1.4.1 Household electricity demand	47
1.4.2 Pressures on electricity prices	48
1.4.3 Household electricity bills.....	50
1.5 How much difference will AI make to the future of energy?	51
1.5.1 Electricity demand outlook from data centres.....	51
1.5.2 Electricity supply to meet data centre loads	53
1.5.3 AI for energy	54
1.5.4 Known unknowns: a longer term view of AI implications on the outlook	55

1.6	What more needs to be done to provide universal, affordable access to electricity and clean cooking?	56
1.6.1	Clean cooking access	57
1.6.2	Electricity access	59
1.7	How are critical minerals and other emerging issues changing the energy security landscape?	61
1.7.1	Critical minerals and energy technology supply chains	62
1.7.2	Electricity security	64
1.7.3	Infrastructure resilience	66
1.7.4	Oil and gas supply chains	67
1.8	Where will all the LNG go?	68
1.8.1	Global LNG outlook to 2035	69
1.8.2	Advanced economies	70
1.8.3	Emerging market and developing economies in Asia	71
1.8.4	Implications for exporters	72
1.9	There is ample manufacturing capacity for many clean energy technologies, especially solar PV and batteries: will we use it?	74
1.10	Where are the gaps in global energy investment?	78
1.10.1	By fuel and technology	79
1.10.2	By country and region	82

2

Setting the scene **85**

2.1	Introduction	87
2.2	Context for the <i>World Energy Outlook-2025</i>	88
2.2.1	Energy demand, investment, technology and emissions trends	88
2.2.2	Macroeconomic and geopolitical context	94
2.2.3	Energy policy developments	98
2.3	WEO scenarios	104
2.3.1	GDP and population	106
2.3.2	Prices	108
2.3.3	Technology costs	112

Part B: Outlooks based on existing trends and policies 117

3

Current Policies Scenario 119

3.1	Introduction.....	121
3.2	Overview	121
3.2.1	Total energy demand.....	121
3.2.2	CO ₂ emissions	124
3.3	Total final consumption.....	125
3.3.1	Transport	126
3.3.2	Buildings	131
3.3.3	Industry.....	134
3.4	Electricity	137
3.4.1	Demand	137
3.4.2	Electricity generation.....	139
3.4.3	Electricity grids	145
3.5	Fossil fuels	151
3.5.1	Oil	152
3.5.2	Natural gas.....	161
3.5.3	Coal.....	166

4

Stated Policies Scenario 171

4.1	Introduction.....	173
4.2	Overview	174
4.2.1	Total energy demand.....	174
4.2.2	CO ₂ emissions	176
4.3	Total final consumption.....	177
4.3.1	Transport	178
4.3.2	Buildings	183
4.3.3	Industry.....	188
4.4	Electricity	193
4.4.1	Demand	193
4.4.2	Electricity generation.....	197
4.4.3	Electricity grids	207

4.5	Fuels	207
4.5.1	Oil	208
4.5.2	Natural gas.....	214
4.5.3	Coal.....	219
4.5.4	Low-emissions fuels.....	222

5

***Implications of CPS and STEPS* 227**

5.1	Overview	229
5.2	Energy security	233
5.2.1	Fuel security.....	234
5.2.2	Electricity security.....	240
5.2.3	Critical minerals and energy technology supply chains.....	247
5.2.4	Extreme weather events	256
5.3	Emissions	264
5.3.1	Air pollution and human health.....	267
5.4	Investment and affordability	269
5.4.1	Energy investment.....	269
5.4.2	Affordability for households.....	273
5.4.3	Energy employment	278

Part C: Outlooks based on goals and pledges 281

6

***Achieving access for all* 283**

6.1	Introduction.....	285
6.2	Clean cooking	286
6.2.1	State of play.....	286
6.2.2	Outlook.....	289
6.2.3	Investment.....	293
6.3	Electricity access.....	297
6.3.1	State of play.....	297
6.3.2	Outlook.....	300
6.3.3	Investment.....	303
6.4	Moving beyond access	307

7.1	Context	315
7.2	Pathways for emissions and temperature.....	321
7.2.1	Emissions	321
7.2.2	Climate outcomes.....	325
7.3	Energy pathways in the NZE Scenario	329
7.3.1	Clean electrification.....	329
7.3.2	Energy efficiency.....	335
7.3.3	Filling up on low-emissions fuels	338
7.3.4	Cutting energy-related methane emissions	343
7.4	Implications	345
7.4.1	Investment.....	345
7.4.2	Social inclusion	347
7.4.3	Energy security	351
7.4.4	Implications for the next ten years.....	353

Part D: Regional insights 355

8.1	Introduction.....	359
8.2	United States	363
8.3	Latin America and the Caribbean	369
8.4	European Union.....	373
8.5	Africa	378
8.6	Middle East.....	382
8.7	Eurasia	386
8.8	China.....	390
8.9	India.....	394
8.10	Japan and Korea	398
8.11	Southeast Asia	402

Annexes

Annex A. Tables for scenario projections..... 409

Annex B. Design of the scenarios 447

Annex C. Definitions..... 475

Annex D. References 497

Annex E. Inputs to the Global Energy and Climate Model 509
