13 February 2019

HIGHLIGHTS

- Our global demand estimate for 2018 is unchanged. Growth in 4Q18 was robust at 1.4 mb/d y-o-y and for 2018 as a whole growth was 1.3 mb/d. China (0.44 mb/d), India (0.21 mb/d) and the US (0.54 mb/d) contributed 1.19 mb/d of the total.
- Growth in demand in 2019 is expected to be 1.4 mb/d, unchanged from our last *Report*. It is supported by lower prices and the start-up of petrochemical projects in China and the US. Slowing economic growth will, however, limit any upside.
- Global supply fell 1.4 mb/d to 99.7 mb/d in January as the Vienna Agreement and Alberta's cuts took effect. Our non-OPEC growth estimates have increased to 2.7 mb/d in 2018 and to 1.8 mb/d in 2019. This is mainly due to higher US output.
- OPEC crude output was 930 kb/d lower in January at 30.83 mb/d, a near four-year low. Compliance with the Vienna Agreement was 86%, with Saudi Arabia, UAE and Kuwait cutting by more than promised. Compliance by non-OPEC participants was only 25%.
- In December, global refining throughput fell 0.7 mb/d y-o-y instead of an expected increase due to lower activity in Asia's four largest refiners: China, India, Japan and Korea. Our 2019 forecast is unchanged, with runs expected to grow by 1.2 mb/d.
- At end-December, OECD oil company stocks were 5.6 mb below the November level at 2 858 mb, up 4.6 mb compared with end-2017. The major stock build in 2H18 was in non-OECD countries. Government stocks drew in 2018 by 22.1 mb, mainly in the US and Europe.
- Brent futures reached a two-month high of \$62.75/bbl in early February, with WTI prices around \$10/bbl below. The Brent-Dubai EFS narrowed to an eight-year low as sour crude markets tightened. Ample supplies of gasoline saw cracks decline into negative territory.

Note to Subscribers:

This month's ***Oil Market Report*** is an abbreviated version.
The usual *OMR* format, with written analysis, will resume for the
15 March edition.

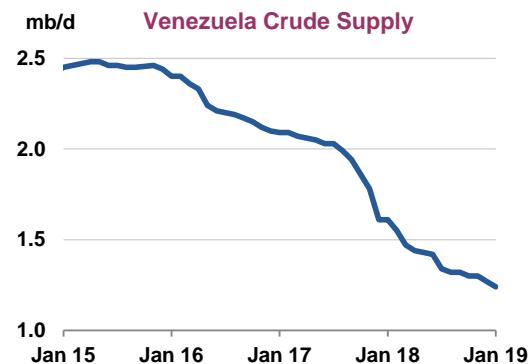

On 11 March, the IEA will publish ***Oil 2019: Analysis and Forecasts to 2024***.

Quality matters

The imposition of sanctions by the United States against Venezuela's state oil company Petroleos de Venezuela (PDVSA) is another reminder of the huge importance for oil of political events. In 2018, about 450 kb/d was shipped to the US, although this is only a fraction of the 1.7 mb/d exported in 1998 when President Chavez was on the verge of power. Much of the oil is used in PDVSA's US refining system, run by its subsidiary Citgo. The collapse in exports mirrors the collapse of production over the same period from 3.4 mb/d to about 1.3 mb/d today. In addition, Venezuela took a political decision to ship oil to China; initially to diversify export markets as Canada's shipments to the US soared, but more recently as repayment for tens of billions of dollars of loans. Shipments to India too, have grown, reaching 360 kb/d in 2017, but last year they fell by 11%.

What we do know is that the sanctions are already making it difficult for PDVSA to export oil. Even so, headline benchmark crude oil prices have hardly changed on news of the sanctions. This is because, in terms of crude oil *quantity*, markets may be able to adjust after initial logistical dislocations. Stocks in most markets are currently ample and, with the implementation of the new Vienna Agreement at the start of the year, there is more spare production capacity available.

Crude oil *quality* is another issue, and, in the wider context of supply in the early part of 2019, it is even more important. Sanctions against Iran, a fall in OPEC supply of 930 kb/d in January, sanctions against PDVSA and Alberta supply cuts all impact directly on the supply of heavy, sour oil. In the case of PDVSA, its oil is typically of the heaviest quality and requires the addition of significant quantities of imported diluents or domestic blending. With the import of diluents now sanctioned by the US, and problems in producing its own lighter crudes, PDVSA will have a tough job to make enough on spec barrels available for export. This is before it gets to the issue of who will buy them.

Long before the US shale revolution took off, Gulf Coast refiners had invested in equipment to process barrels expected to get heavier and sourer. Instead, Venezuelan supplies dwindled, as did Mexico's, and Saudi exports to the US fell sharply as they turned their attention to fast growing Asian markets. Meanwhile, Canadian exports, mainly of heavier, sourer crude, poured into the Gulf to partly fill the gap. In addition, despite the preference of refiners for heavier crudes, huge volumes of cheap shale oil became available because exports were not allowed and stocks built up to record levels. In time, the US export ban was lifted and producers could sell oil abroad at significantly higher prices. Therefore, Gulf Coast importers would continue to need the kind of crude produced by Venezuela and some Middle Eastern countries.

With heavy barrels being removed from the market, refiners have to pay more. The premium of Light Louisiana Sweet crude over Mars crude has fallen to below \$1/bbl from more than \$4/bbl in November. Since the US sanctions against Venezuela were announced, the premium of Mars over WTI has soared from \$4.50/bbl to over \$7.50/bbl.

So far, there are no signs that other producers, e.g. Saudi Arabia, are intending to push more barrels into the market to offset shortfalls. Oil prices have not increased alarmingly because the market is still working off the surpluses built up in the second half of 2018, when global supply is estimated to have exceeded demand by 1.3 mb/d. In *quantity* terms, in 2019 the US alone will grow its crude oil production by more than Venezuela's current output. In *quality* terms, it is more complicated. Quality matters.

1 OPEC figures are crude oil only, Non-OPEC figures are total oil supply (including NGLs).

2 Based on Oct-2018 production, except for Azerbaijan and Kuwait based on Sept-2018 and Kazakhstan Nov-2018. Non-OPEC supply baseline based on IEA estimates.

3 Nigeria supply baseline based on IEA estimates, which exclude Akpo and Agbami condensates.

4 Iran, Libya, Venezuela exempt from cuts.

5 Qatar left OPEC on 1 Jan 2019.

6 Capacity levels can be reached within 90 days and sustained for an extended period.

7 Spare capacity excludes Iranian crude supply that is offline due to sanctions.

1 Global Indicator Refining Margins are calculated for various complexity configurations, each optimised for processing the specific crude(s) in a specific refining centre. Margins include energy cost, but exclude other variable costs, depreciation and amortisation. Consequently, reported margins should be taken as an indication, or proxy, of changes in profitability for a given refining centre. No attempt is made to model or otherwise comment upon the relative economics of specific refineries running individual crude slates and producing custom product sales, nor are these calculations intended to infer the marginal values of crude for pricing purposes.

¹ Measured as deliveries from refineries and primary stocks, comprises inland deliveries, international marine bunkers, refinery fuel, crude for direct burning, oil from non-conventional sources and other sources of supply. Includes Biofuels.

² Other Asia includes Indonesia throughout. Latin America excludes Ecuador throughout. Africa excludes Angola, Gabon and Equatorial Guinea throughout.

³ Net volumetric gains and losses in the refining process and marine transportation losses.

⁴ Comprises crude oil, condensates, NGLs, oil from non-conventional sources and other sources of supply.

⁵ Includes changes in non-reported stocks in OECD and non-OECD areas.

⁶ Equals the arithmetic difference between total demand minus total non-OPEC supply minus OPEC NGLs.

¹ Demand, measured as deliveries from refineries and primary stocks, comprises inland deliveries, international bunkers and refinery fuel. It includes crude for direct burning, oil from non-conventional sources and other sources of supply. Jet/kerosene comprises jet kerosene and non-aviation kerosene. Gasoil comprises diesel, light heating oil and other gasoils.

North America comprises US 50 states, US territories, Mexico and Canada.

¹ Stocks are primary national territory stocks on land (excluding utility stocks and including pipeline and entrepot stocks where known) and include stocks held by industry to meet IEA, EU and national emergency reserve commitments and are subject to government control in emergencies.

² Closing stock levels.

³ Total products includes gasoline, middle distillates, fuel oil and other products.

⁴ Total includes NGLs, refinery feedstocks, additives/oxygenates and other hydrocarbons.

⁵ Includes government-owned stocks and stock holding organisation stocks held for emergency purposes.

DAY'S OF IEA Net Imports⁶	187	-	186	-	190	-	191	-	-	-

¹ Total Stocks are industry and government-controlled stocks (see breakdown in table below). Stocks are primary national territory stocks on land (excluding utility stocks and including pipeline and entrepot stocks where known) they include stocks held by industry to meet IEA, EU and national emergency reserves commitments and are subject to government control in emergencies.

² Note that days of forward demand represent the stock level divided by the forward quarter average daily demand and is very different from the days of net imports used for the calculation of IEA Emergency Reserves.

³ End December 2018 forward demand figures are IEA Secretariat forecasts.

⁴ US figures exclude US territories. Total includes US territories.

⁵ Data not available for Iceland.

⁶ Reflects stock levels and prior calendar year's net imports adjusted according to IEA emergency reserve definitions (see www.iea.org/netimports.asp).

Net exporting IEA countries are excluded.

¹ Data based on monthly submissions from IEA countries to the crude oil import register (in '000 bbl), subject to availability. May differ from Table 8 of the Report. IEA Americas includes United States and Canada. IEA Europe includes all countries in OECD Europe except Estonia, Hungary, Slovenia and Latvia. IEA Asia Oceania includes Australia, New Zealand, Korea and Japan.

² Iraqi Total minus Kirkuk.

³ Iranian Total minus Iranian Light.

⁴ 33° API and lighter (e.g., Bonny Light, Escravos, Qua Iboe and Oso Condensate).
