

# Making the Energy Sector More Resilient to Climate Change

IEA Technical Day, COP 21, December 3, 2015

Ellina Levina Senior Energy and Climate Analyst, IEA

### **IEA messages to COP21**

To shift the energy sector onto a lowcarbon path that supports economic growth and energy access:

- 1. Take five key actions, led by energy efficiency and renewables, to peak then reduce global energy emissions.
- 2. Use the Paris Agreement to drive short-term actions consistent with long-term emission goals.
- 3. Accelerate energy technology innovation to make decarbonisation easier and even more affordable.
- 4. Enhance energy security by making the energy sector more resilient to climate change impacts.

Making the energy sector more resilient to climate change

## Risks to the energy sector from climate-change impacts

- Extreme weather events such as storms, forest fires, landslides, floods and extreme temperatures
- Fuel production
- Fuel delivery

Changes in water availability

- Thermal power plants cooling
- Unusual seasonal temperatures
- Hydropower, biofuels

Rising sea levels

T&D networks

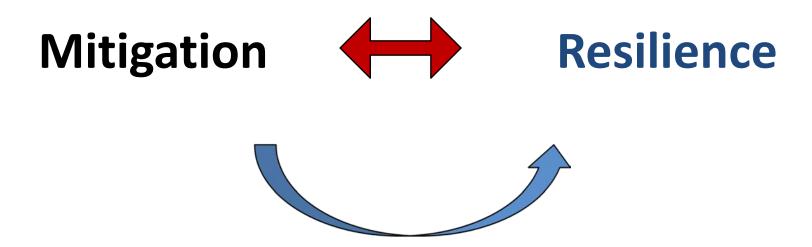

Permafrost thaw

## More than energy, this is about economies and vital sectors like health and education . . .

## In the climate change space:

- Mitigation is powerful resilience strategy
- Synergies between mitigation and adaptation actions should be emphasised (e.g. distributed generation, energy efficiency)
- Mode of decarbonization affects resilience challenge

### The resilience "value chain"

- > Robustness: ability to withstand threats
  - Risk assessment, auditing, reporting
  - Adaptive practices by businesses and governments
- Resourcefulness: capacity to maintain essential functions under extreme events
  - Emergency preparedness measures
- ➤ Recovery: capacity to overcome service interruptions
  - Reactivating systems
  - Pre-deployment of recovery assets

# Businesses are the key actors in resilience-building

- > Risk management is integral to business decision-making
  - Climate risk assessment, prevention and management to
    - >achieve robustness of assets,
    - resourcefulness of operations during extreme events and
    - >quickly recover
  - **≻**Insurance
- > Adaptive practices
  - ➤ Management and technical measures
  - > Technological and structural measures
  - > Training and education
  - > Recovery and resourcefulness in addition to robustness

## Governments are also key actors in resilience

- Create incentives to facilitate/prompt resiliencebuilding by business
- Create enabling frameworks that include:
  - Awareness raising and modelling
  - Inter-governmental coordination (domestic and international)

#### but also....

- Emergency preparedness and response measures
- Managing "Own-assets"

### IEA: a partner in the effort ... iea

#### 1. Dialogue facilitation

• 5 Nexus Forum meetings since 2012

#### 2. Data and modelling

 WEO Special Report 2013: chapters on resilience, WEO 2015: water stress case studies in China, India

### 3. Research stocktaking on impacts, vulnerability, resilience policies

 PAMs data base, country reviews, emergency response reviews

### 4. Policy analysis

Resilience brochure for the COP 21
