Major Trends Affecting Grid & Grid Storage

- ▶ **Deployment of renewable generation –**
 - Faster than load growth – displacing conventional generation
 - Variable – creating need for flexibility
 - Flexibility -
 - Acquired via markets – double edged sword for storage
 - ◆ Creates revenue stream for storage
 - ◆ Enables alternatives (e.g. Demand Response)
- ▶ **Smart Grid –**
 - Enables new sources of flexibility
 - Enables multiple functions for distributed storage
- ▶ **Reliability/Resiliency**
 - High reliability zones
 - Microgrids – Storage a vital component

Grid Operations & Stochastic Generation

BPA Aggregated Wind (March 12-18, 2014)
Up to 500 MW Forecast error, 1 GW per hour ramp

Intermittent supply of PV for California ISO

- Over-generation
- Congestion
- Markets for transmission rights
- Frequency ride-through capability
- Impacts on dynamics and stability
- Reactive power generation/voltage
- Coordinating System Protection Schemes,
- System balancing, reserve requirements, and frequency control;
- Dispatch of the remaining conventional units (e.g. more starts and cycling), and
- Transmission cost recovery and allocation

PV Penetration - creating operational challenges

Rapid PV penetration increasingly displaces mid-day loads over time

Challenges presented by PV penetration become barriers under business-as-usual operations

- Ramp rate (load change) at end of day expected to double
 - Rapid swings complicate dispatch – a challenge for reliability
 - Increased costs for more reserve power plants
- Rapid distribution system voltage swings from fluctuations in output (intermittently cloudy days) must be managed
 - Disruptive to electronics; when outside ANSI standard range can damage customer equipment
 - Voltage management gear will wear out – designed for ~10 operations/day now will see 100s
 - Who will pay for the upgrades or storage needed? Regular customers? PV owners?

Coordination is Important

There are 37 BAs within the Western Interconnection, as wind and solar penetration in each BA increases, it becomes more challenging to operate individually

		11% Case		33% Case	
		Up	Down	Up	Down
Regulation Capacity, GW	Individual BAs	1.76	-1.82	3.65	-3.78
	CBA	0.74	-0.75	1.05	-1.09
	Savings in %	58%	59%	71%	71%
Regulation Ramp Rate, MW/min	Individual BAs	566	-597	962	-993
	CBA	138	-143	222	-220
	Savings in %	75%	76%	76%	77%
Load Following Capacity, GW	Individual BAs	12	-11	18	-18
	CBA	4.1	-3.9	5.2	-5.0
	Savings in %	64%	66%	70%	72%
Load Following Ramp Rate, MW/min	Individual BAs	356	-357	708	-715
	CBA	186	-190	245	-254
	Savings in %	48%	47%	65%	65%

Consolidation saves over \$600M/yr

Simply going to 10 minute scheduling will save over \$750M/yr

Intra-Hour Balancing 2020 Grid with 20% Renewable Portfolio Stds. (Wind)

18.6GW, 8.6 GWh of Energy Storage needed to meet intra-hour balancing capacity

\$170/kWh is the price-point at which widespread energy storage becomes cost effective

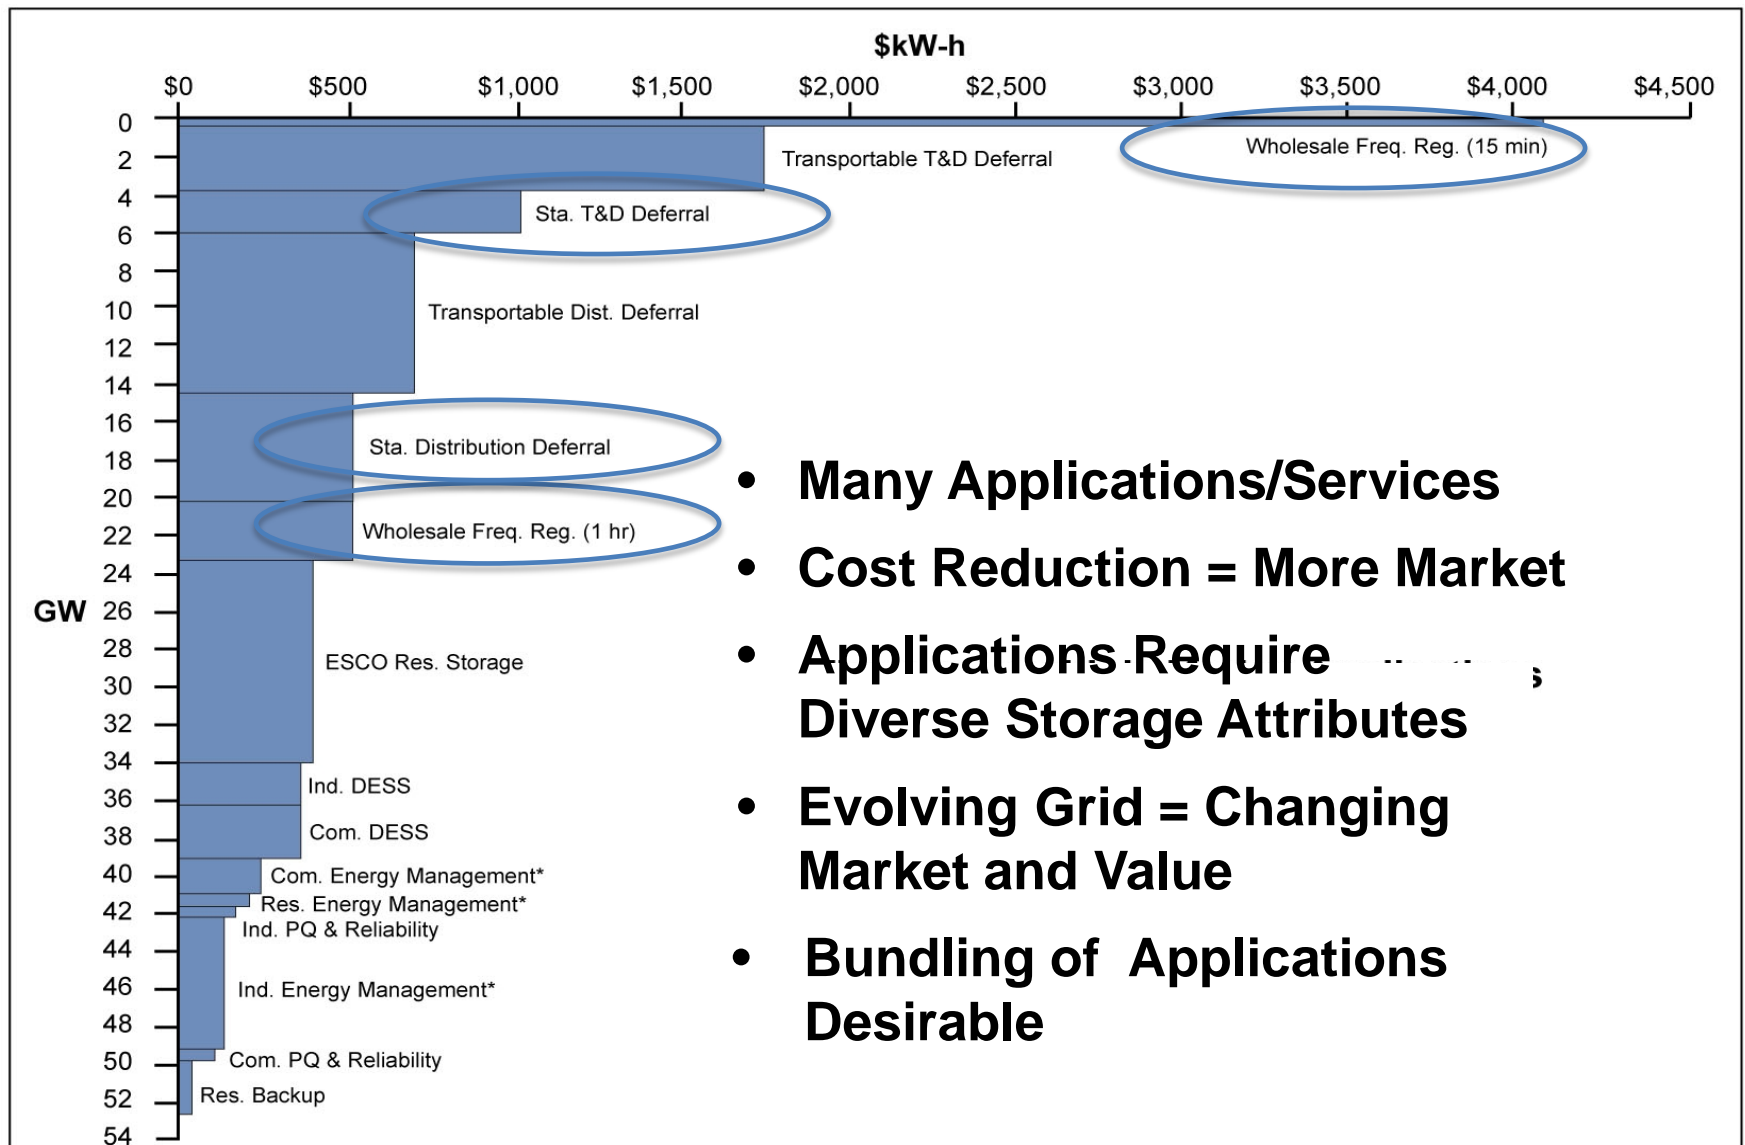

Grid Scale Energy Storage

Pacific Northwest

Grid Energy Storage Diverse Markets Encourage Bundling and Cost Reduction

- Many Applications/Services
- Cost Reduction = More Market
- Applications Require Diverse Storage Attributes
- Evolving Grid = Changing Market and Value
- Bundling of Applications Desirable

Bainbridge Island Storage Analysis

Bainbridge Setup:

- 3 Substations
- 2 radial substations supply power for most of the island
- Substations are capacity constrained
- Reliability issues with radial transmission AND distribution

Proposed Solution:

- Add new substation to the island
 - Community opposition

Bundling Services: how to do it optimally?

Bundling Services: how to do it optimally?

Bundling Services: how to do it optimally?

Total Value of Bundled Values

Energy Storage at Distribution System Substation

Only when 5 value streams are captured storage can be cost-effective
requires: optimized control strategies to avoid double counting of resources

Grid Scale Energy Storage Challenges

Smart Grid

Resiliency

Challenges

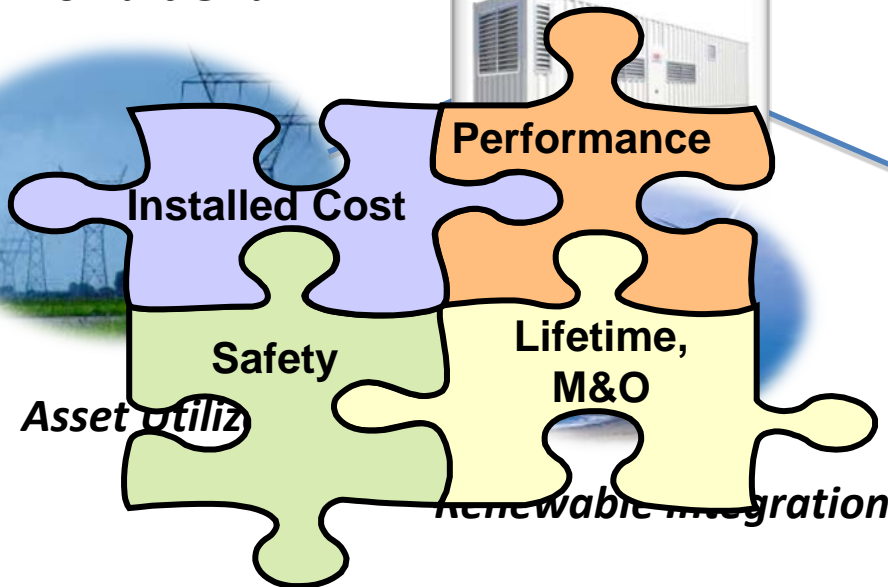

Competitive storage technologies
Reliability

- Validated reliability & safety

- regulatory environment

- Industry acceptance

Summary

- ▶ **Deployment of renewables generation increase the need for storage (and other sources of grid flexibility)**
- ▶ **Institutional and markets adapting to provide more flexibility – creating opportunity and challenge for storage**
- ▶ **Market projections for storage are dramatically up**
- ▶ **High storage system costs encourage realization of multiple storage benefits/revenue streams**
- ▶ **A number of challenges face widespread deployment of grid energy storage**
- ▶ **Storage industry and governments are responding to the challenge – new technologies, new incentives, maturing deployment**
