

IEA Buildings, Energy Efficiency & Behaviour Workshop

Optimising Power @ Work

A Staff Energy Awareness Campaign

Conor Clarke BSCEng, Dip Eng, MIEI

Head of Energy Conservation Unit/Senior Engineer Office of Public Works, Dublin, Ireland.

Office of Public Works

- Property Management (Central Government Portfolio) is one of the main activities of the Office of Public Works (OPW)
- Approximately 2000 properties, many small, Total Floor Space of 1.4M m² (for 50,000 Staff)
- Predominantly office accommodation but also includes data centres, laboratories, heritage buildings, etc.
- Total Energy Spend = €35M €40M

- OPW provides a central service in terms of technical expertise and management of buildings
- Work closely with all our customers on a day to day basis.
- OPW owns/leases the properties on behalf of the State
- Individual occupying Departments pay for Maintenance and Energy

Energy Conservation in the Public Service

- Ireland's National Energy Efficiency Action Plan (NEEAP) requires Public Service Organisations to provide exemplary role
- Public Sector Target = 33% energy reduction by 2020
- Originally thought to be ambitious but OPW well on the way to achieving this goal
- No room for complacency
- Energy Conservation Programmes easiest savings are the initial savings.

- 2007: 2 Pilot Studies in 10 Buildings
 Demonstrated savings of up to 19% Possible
- 2008 2010: Optimising Power @ Work 1
- 2010 2015: Optimising Power @ Work 2

Main Focus of the Pilot Study:

- Switch Off
- Switch Off Early
- Identify Areas Of Energy Wastage

Concentrate on Electrical Consumption:

- Electricity = 59% Total Energy Consumption
- Electricity = 78% Carbon Dioxide Emissions
- Staff have direct influence
- Current Performance was 'Poor'

Lessons from the Pilot:

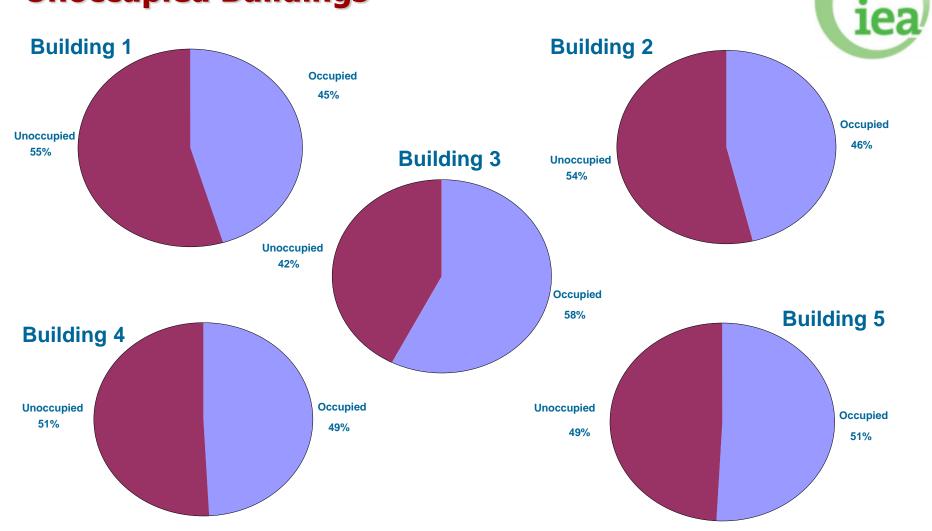

- 35% Electrical Energy Used at Night
- 20% Electrical Energy Used at Weekends
- 55% Electricity used when building is unoccupied!

Unoccupied Buildings

Optimising Power @ Work 1

- 250 Buildings in the campaign
- 2 Service Providers Appointed
- 15% Reduction Target
- Actual average savings of 12% achieved

Optimising Power @ Work 2 - Targets

- Target 20% average energy saving.
- Minimum saving of 15% in each building i.e. buildings that did not achieve a 15% in Phase 1 were intensively targeted.
- Buildings, which have already achieved >20%, a 5% further reduction

The key success factors:

- Three key elements to programme:
 - 1. Technology
 - 2. Specialist Resources
 - 3. Continuous Staff Engagement
- Endorsement at CEO & Senior Management level essential for success

Optimising Power @

Active energy teams within participating buildings is the cornerstone of the campaign

The OPW Programme

1) Technology - Availability of up to date reliable energy data

- OPW installed dedicated energy monitoring equipment in all buildings which have floor areas over 1000m².
- Approximately 270 buildings in total
- Best estimates indicate that these are responsible for 80% of our expenditure on energy.

The OPW Programme

2) Specialist Resources: *The application of adequate* and suitable resources

- Potential net savings are up to three times the investment, per annum.
- Worthwhile and necessary to apply proper and adequate resources
- A proper resource is an experienced specialist
- By applying suitable resources it is reasonable to set targets and expect results.

🛛 ptimising Power @ Work

The OPW Programme

3) Continuous Staff Engagement

- Senior Management buy-in
- Appoint Energy Officer
- Establish Energy Teams
- Campaign launch
- General Staff Involvement
- Set Targets and Benchmarks
- Monitor results against targets

Intensive Staff Engagement

- Monthly Energy Team Meetings
- Monthly Energy Reports
- **Inter-Building Competitions**
- National Awards Programme
- Night Audits
- **BMS** Audits
- Staff Energy Workshops/Lectures
- Energy Portal Web based
- Staff Presentations / Quiz

Optimising Power @ Work

Energy Awareness Campaign:

Levels of Engagement

- **Excellent:** Full support from management, appropriate and proactive Energy Officer and team, good response to the programme, taking their own initiative in energy savings.
- **Good:** Good support from management, energy manager and team, medium/good response to the programme.
- **Fair:** Reasonable support from energy manager and team, medium/fair response to the programme.

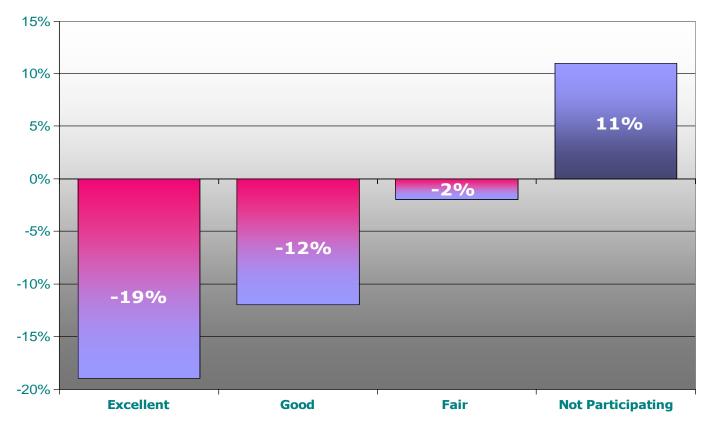

Levels of Engagement:

Average Savings V Level of Engagement

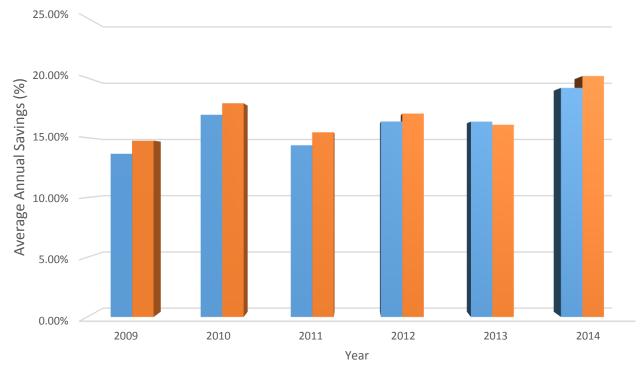

Average Annual Energy and Carbon Dioxide Savings

Carbon Dioxide Reduction (%) Energy (%)

Results:

30% 25% Total Buildings (%) 20% 15% 10% 5% 0% -51% to -60% -41% to -50% -31% to -40% -21% to -30% -11% to -20% -1% to -10% 0% to +9% +10% to +19% 20% to +29% +30% to +39% +40% to +49%

Building Energy Performance (2014)

Annual Energy Consumption Compared to Benchmark Year

Particulars	Saving
Average Annual Energy Savings (February 2015)	20.2%
Annual Cost Savings (February 2015)	>€4.9M/annum
Electricity Portion of Overall Saving	55%
Heating Fuel Portion of Overall Saving	45%

Optimising Power @ Work

The Future: New Public Sector Programme:

- Following the success of OPW's existing *Optimising Power* @ *Work* Energy Conservation Campaign, Government Decision to use as a model for roll-out to wider public sector.
- OPW identified as the best organisation to deliver this.
- €9M allocated over a 3 year period.
- Hospitals, Prisons, Universities, Institutes of Technology, Local Authorities, etc.
