

RUSSIAN ENERGY OUTLOOK UNTIL 2035

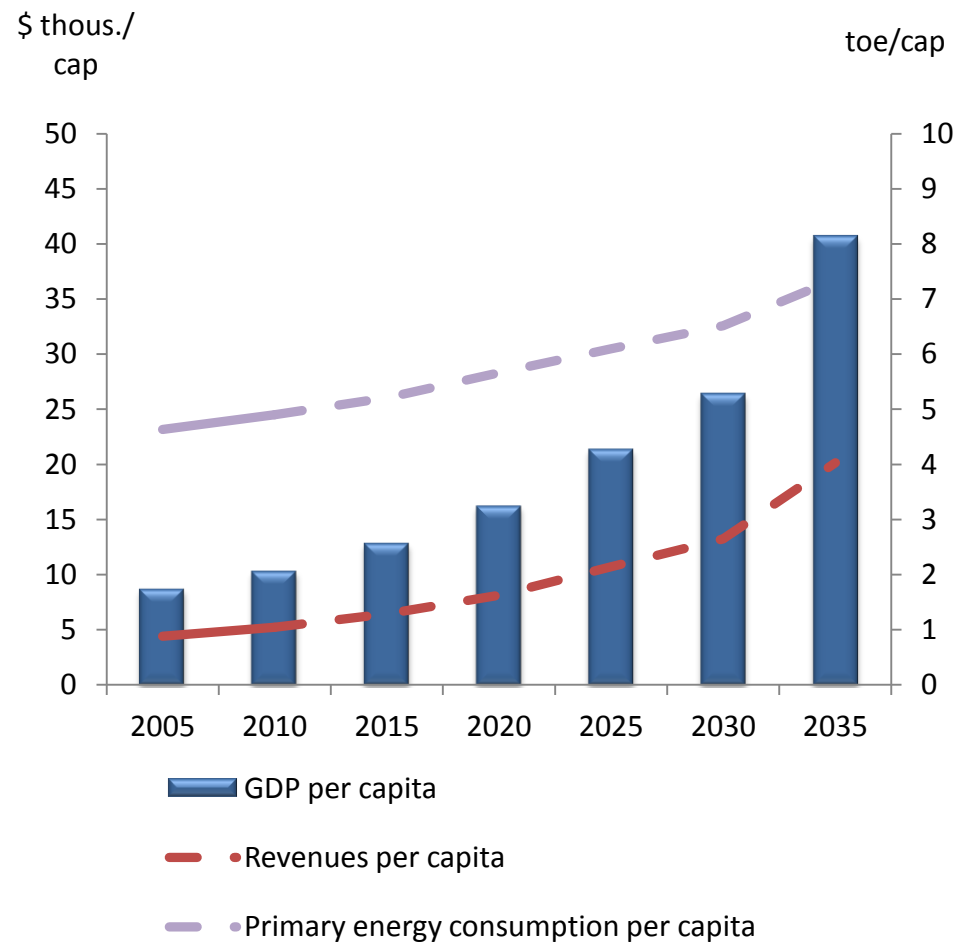

MOSCOW 2012

By 2035, Russia's economy will grow by more than 3 times

Russian GDP and population forecast

Russian GDP, per capita revenues and energy consumption forecast

The crisis has somewhat slowed the decrease in energy intensity of the Russian economy, but by 2035, it will decline by 60%

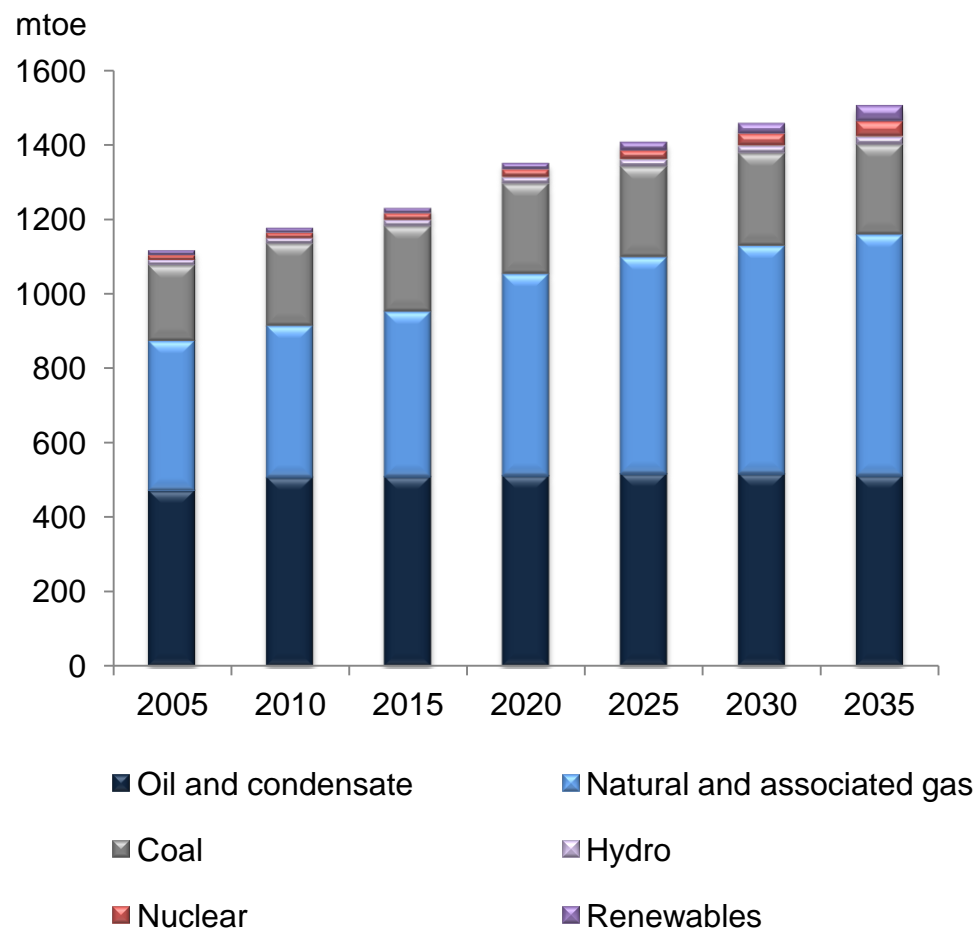

GDP energy intensity in Russia

toe/thous. \$ 2010

Natural gas will retain a dominant position in the structure of energy production and consumption, the role of non-fossil fuels will increase

Energy resources production in Russia

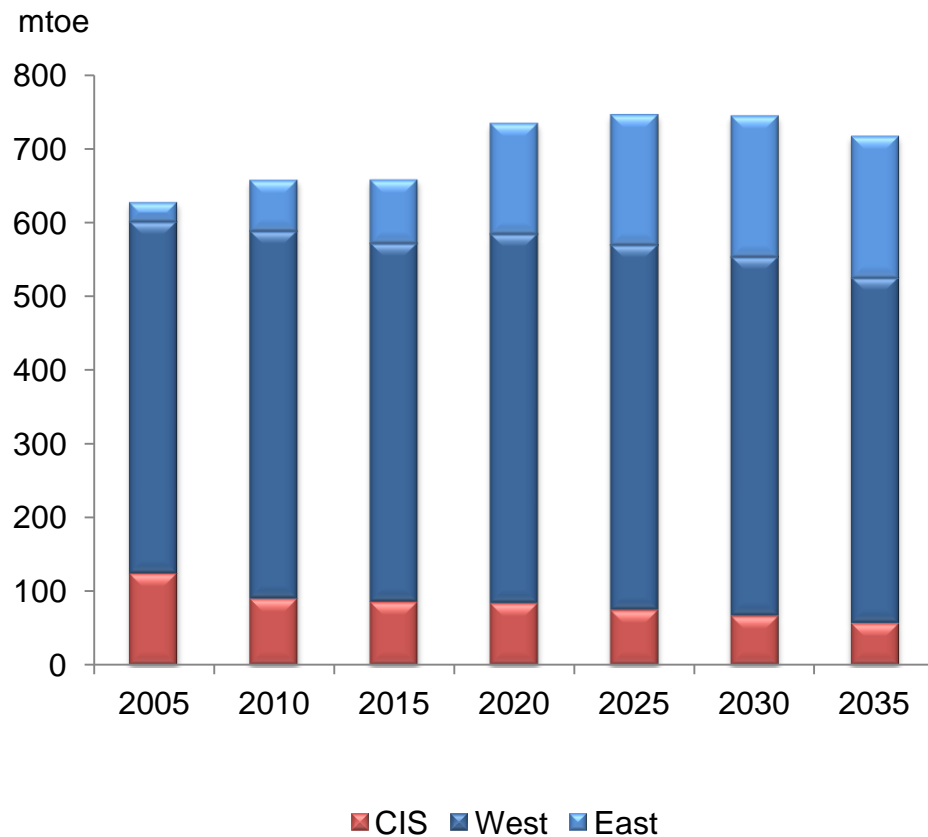

Energy resources consumption in Russia

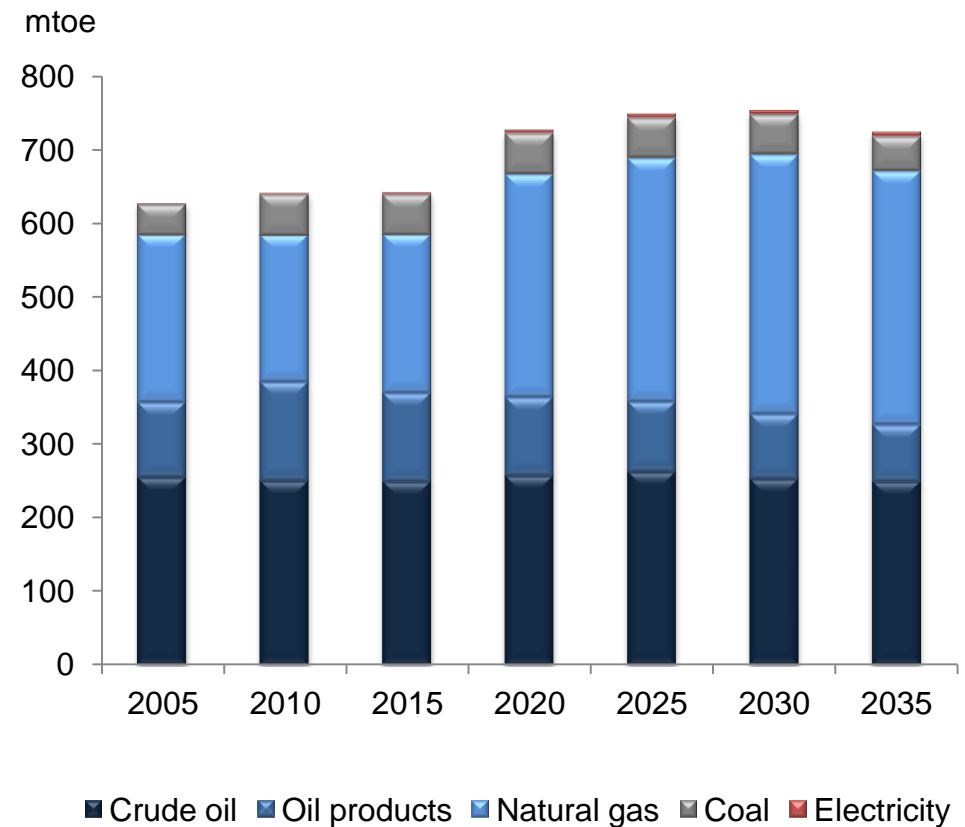

The amount of energy exports to Asia will increase, the share of natural gas in exports will increase, while the share of oil will be reduced

Russian energy resources exports by destination

Russian energy resources exports by type

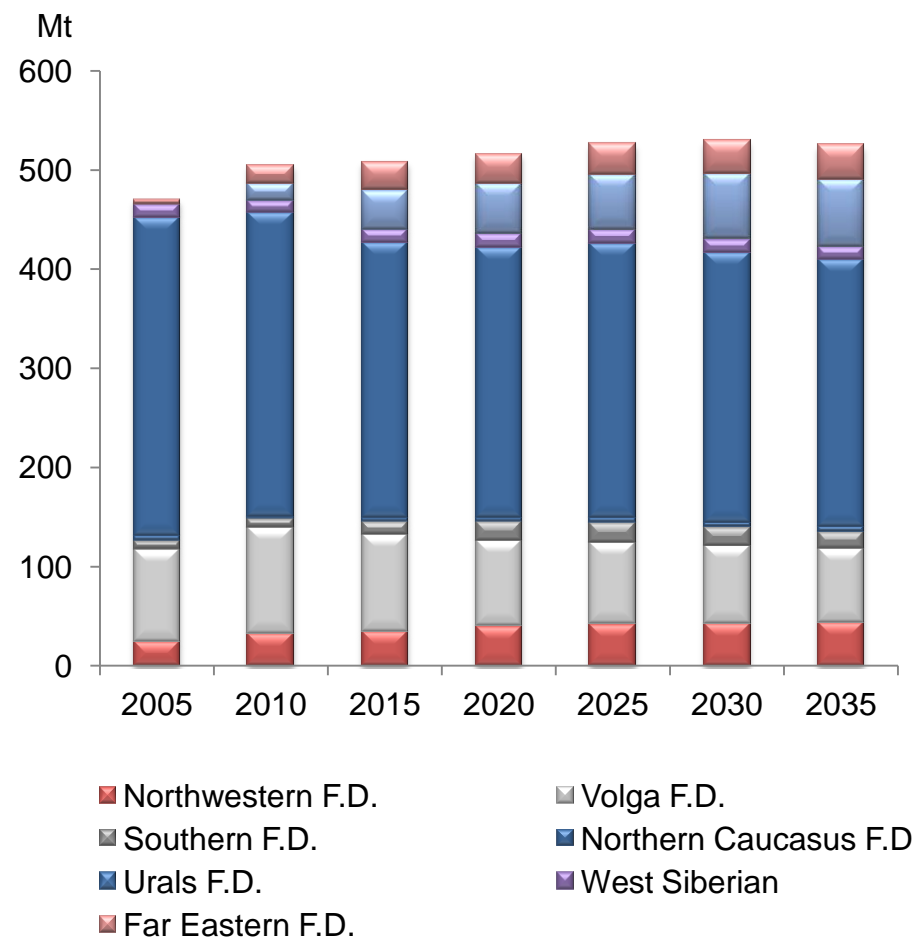

The volumes of oil production in Russia are almost stable, while the production drop in the "old" regions should be compensated by the forced growth of oil production in other regions, and, in particular - in the Eastern Siberia and the Far East

Russian oil balance

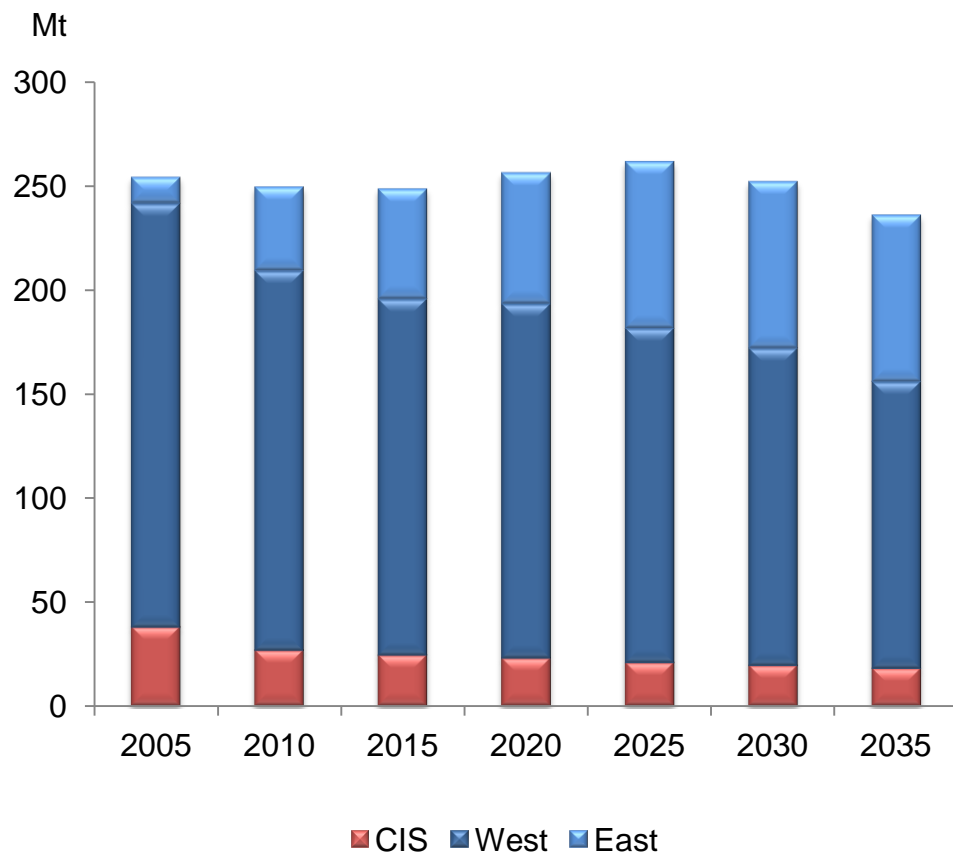

Russian oil production by region

Oil export volumes will decline after 2025, while the role of the Eastern direction and the depth of processing will increase

Russian oil exports

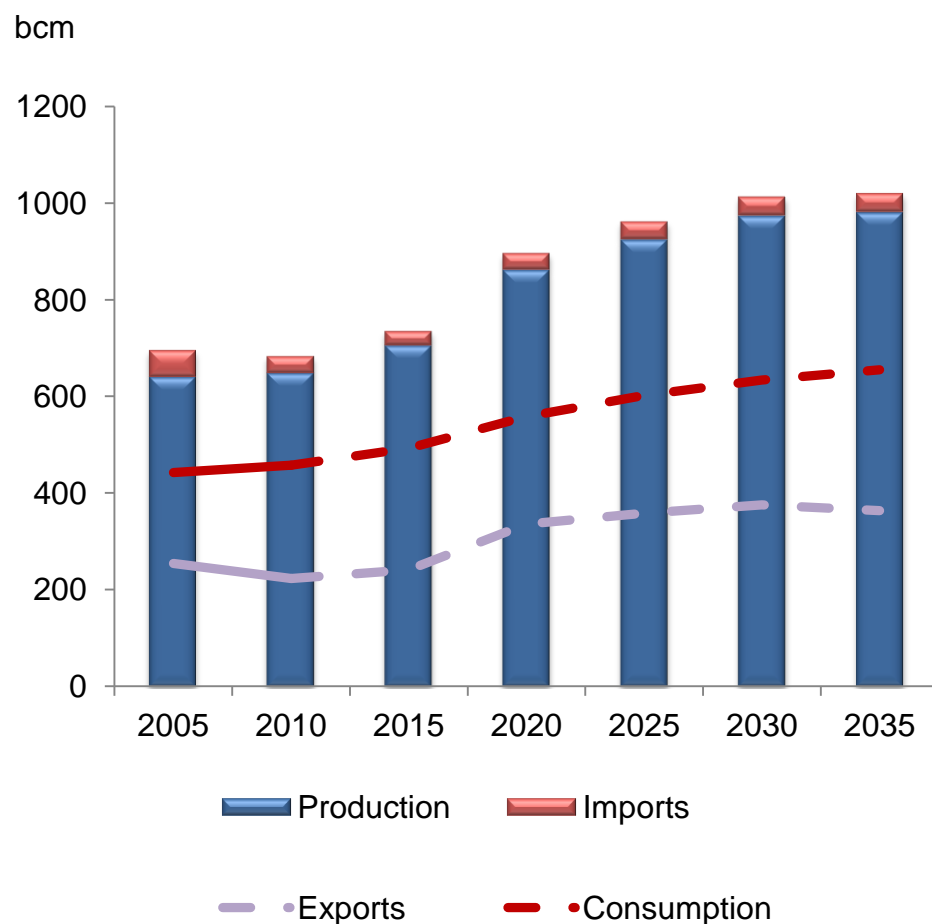

Refining oil in Russia by products

Gas production will be increased due to the development of the new fields in Eastern Siberia and Far East, and the commencement of the Shtokman field development

Russian natural and associated gas balance

Russian natural gas production by region

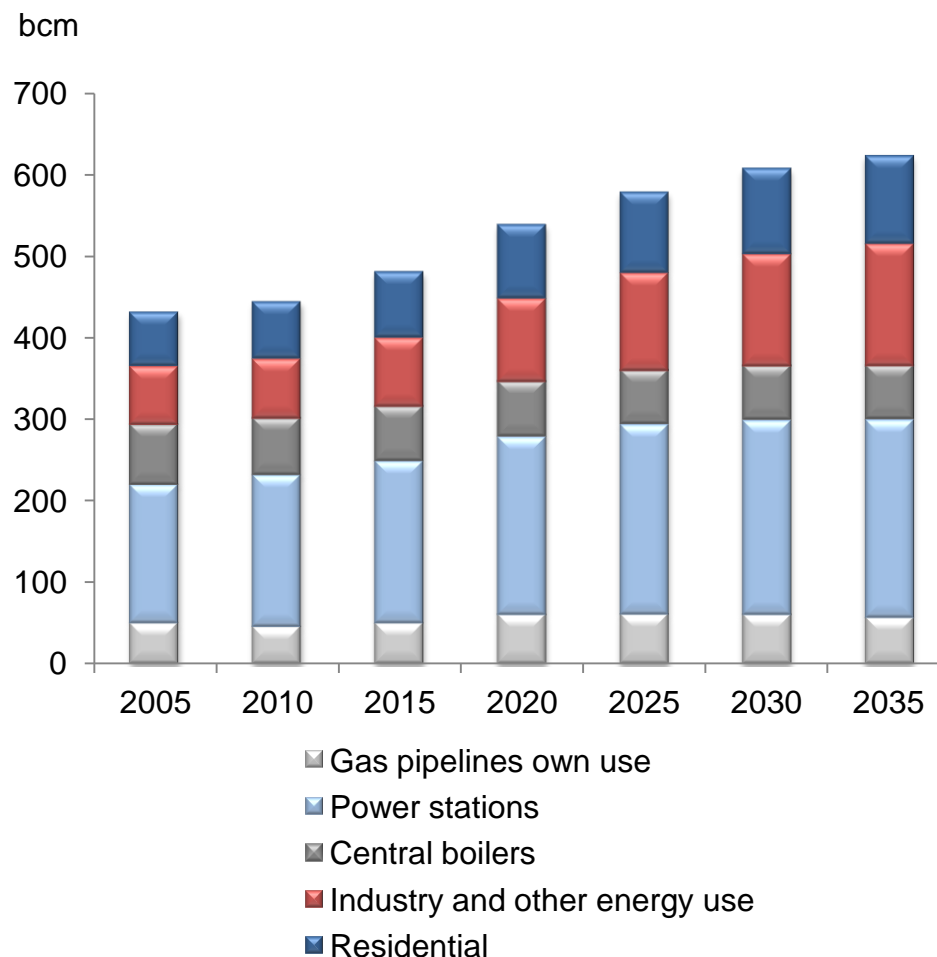

The main volumes of gas will be consumed in the domestic market, where the demand is growing in all the sectors, the largest increase in gas exports will be to the East direction

Russian natural gas exports

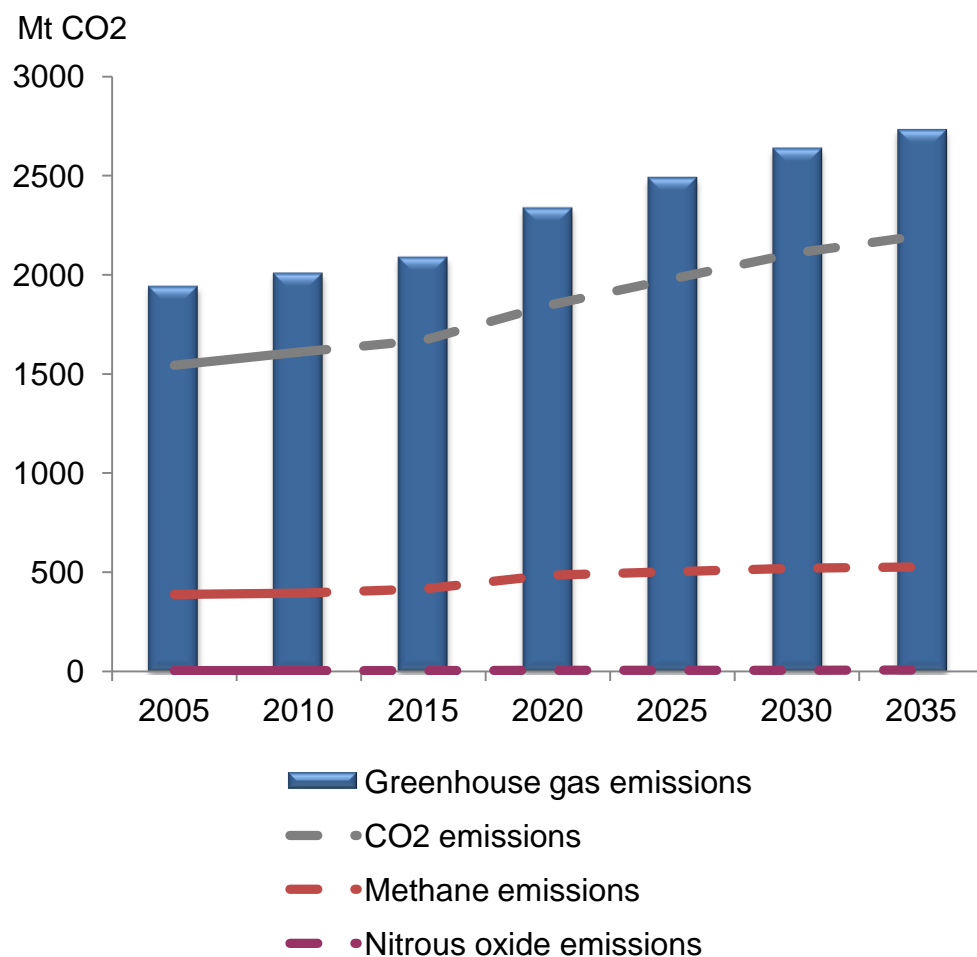

Russian natural gas consumption by sector

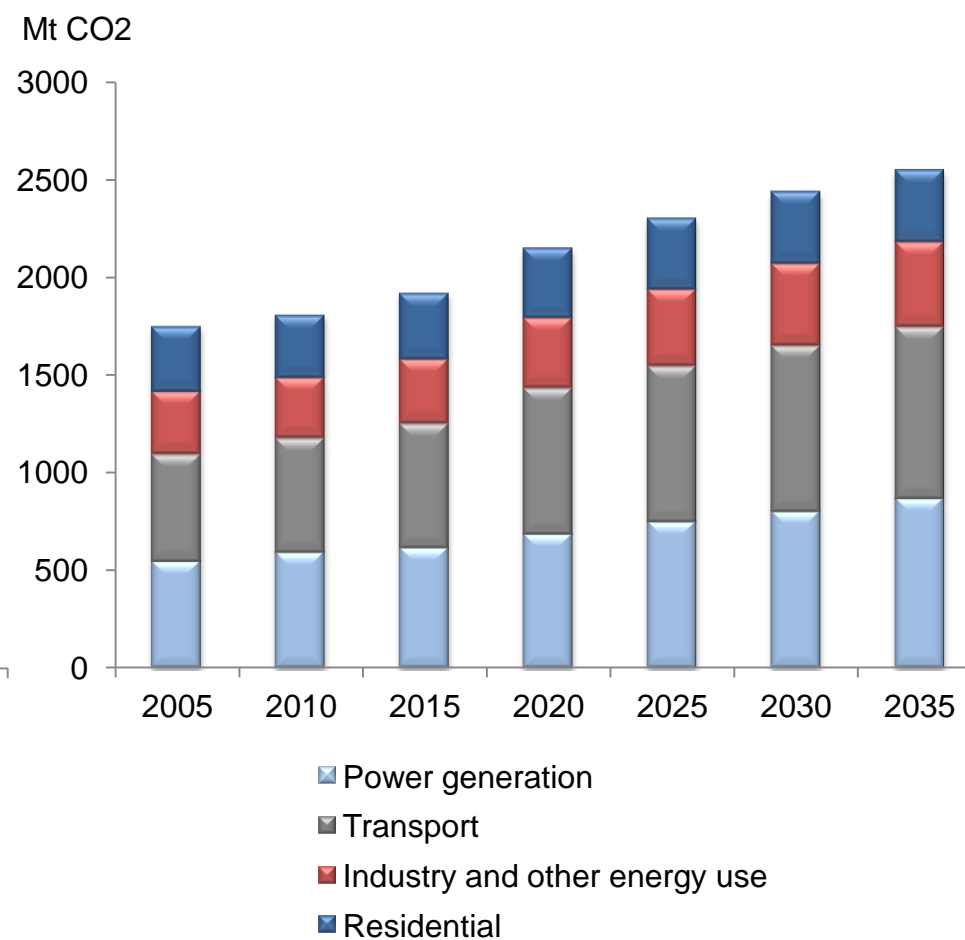

Greenhouse gas emissions will be increased by 40% by 2035 due to the increased emissions coming from the electric power sector and auto transport

Greenhouse emissions

Greenhouse emissions by sector

The development of the fuel and energy sector will require 2.7 trillion dollars of capital investments for the period up to 2035
