Cement Sector View on Industrial Innovation
Cement is an energy intensive industry with a high proportion of process emissions

The cement and lime industries are unique due to the fact that most of their greenhouse gas emissions are not caused by energy use from fuel combustion, but come from the raw materials themselves. Also the process involves a high energy consumption (thermal and electricity).

Near 60% of CO2 emissions come from inevitable chemical reactions in the process.
Carbon emission reduction levers

• Existing levers for reduction:
  – **Thermal and electric efficiency** – deployment of existing state of the art technologies in new cement plants, and retrofit of energy efficiency equipment where economically viable.
  – **Alternative fuels** – use of less carbon-intensive fossil fuels and more alternative (fossil) fuels and biomass. Include wastes that may otherwise be burnt in incinerators, landfilled or improperly destroyed.
  – **Clinker substitution** – substituting carbon intensive clinker, an intermediate in cement manufacture, with other, lower carbon, materials with cementitious properties.

• Technology under development: Carbon capture storage and Re-Use (CCS-U)

• Potential low carbon cements – Still not known their features
CSI-IEA Cement Technology Road Map

• IEA has worked together with the World Business Council for Sustainable Development (WBCSD) Cement Sustainability Initiative (CSI) to develop a technology roadmap for cement.

• The roadmap’s technology mitigation options are outlined in a set of 38 technology papers developed by the European Cement Research Academy (ECRA) sponsored by the CSI.

• The roadmap is based on model data from Energy Technology Transitions for Industry (IEA, 2009).
Main conclusions from the Roadmap

• The roadmap estimates that the cement industry could reduce its direct emissions 18% from current levels by 2050.
• Outlines supportive policies, estimates financial requirements, and describes technical changes, along with recommendations to support research and development (R&D) and future investment decision-making.
Regional Roadmaps India and Brazil

Same process as for the Global Roadmap in 2009
- Partnership with IEA for their scenario and modeling capabilities
- Technical papers developed by regional industry experts
- Set of existing emissions data (GNR)

Financial support by IFC

Two phases
- Development of the roadmap
- Tests on some volunteer plants to implement some of these technologies

Technical and political workshops to widespread knowledge and build capacity in the country
Low-Carbon Technology Roadmap for the Indian Cement Industry

Roadmap partners

In consultation with

Principal supporter

Industry supporters

www.wbcsdcement.org/india-tech-roadmap
2-Phase process

Phase I
- Technology papers
- Cement demand data, data modeling, analysis
- Data coverage (85%+)
- Stakeholder outreach
  - Technology
  - Financing
  - Policy
- Stakeholder & partner review

Phase II
- Individual plant-level analysis of roadmap
- Potential investments identified
India cement production forecast

KEY POINT: Cement production is projected to increase between 3.6 and 6.3 fold between 2010 and 2050.
Roadmap findings

Notes: Includes only direct CO₂ emissions from cement manufacturing; indirect emissions from the use of electricity are not taken into account.

KEY POINT: Total savings between the 6DS and 2DS amount to 212 MtCO₂.
Key indicators for Indian cement industry in the 2DS

Colaboradores
Low-Carbon Technology Roadmap for the Brazilian Cement Industry – Process

1. Data collection
2. Development of Technical Papers
3. Data Modelling and Analysis
4. Stakeholders review
5. Evaluation
Low-Carbon Technology Roadmap for the Brazilian Cement Industry – Update

- Currently choosing **Consultants** (research centres and universities), that will develop the Technical Papers and

- In parallel, together with IEA and a Industry WG the **Data Collection spreadsheet** is being developed.

- These two activities are planned to be concluded by the end of 2014. Beginning of 2015 **some technical workshops on Energy Efficiency and CCS** will be planned, with the participation of Industry Experts, Academics, Equipment suppliers and Research centres.
Thank you
