
Energy Management Action Network 1st Webiner

“Sharing the outcomes of EMAK activities ”

Yukari Yamashita

Board Member, Director

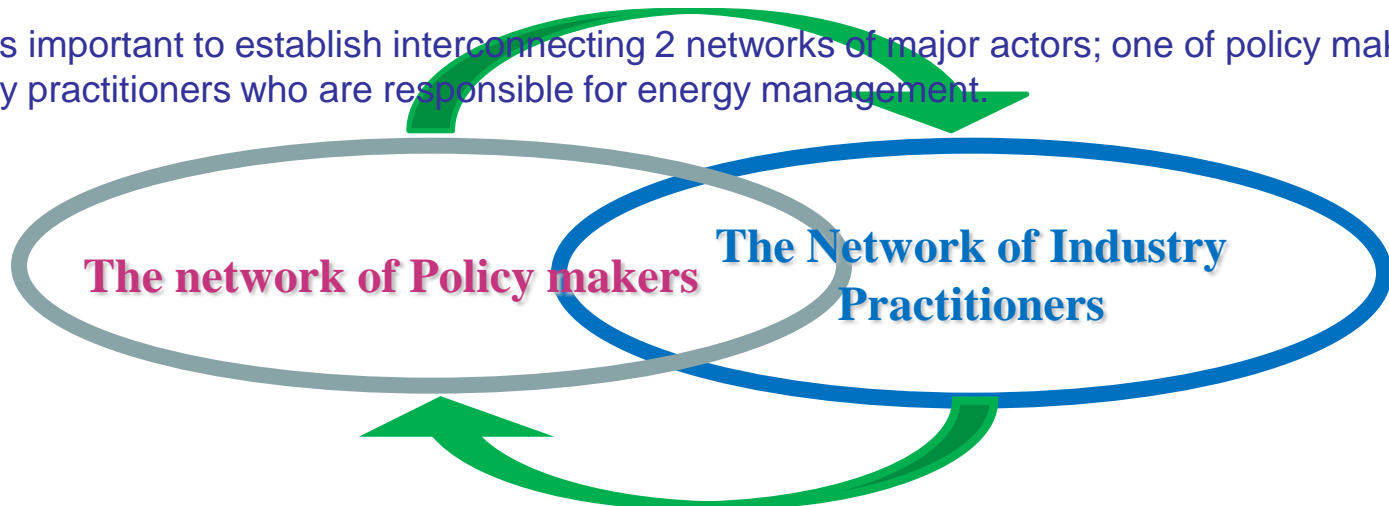

The Institute of Energy Economics, Japan (IEEJ)

March 7, 2012

What is EMAK?

EMAK is energy management knowledge sharing scheme.

- To promote energy efficiency, effective energy management systems in the industrial sector is essential in addition to technological solutions through deployment of energy efficient products.
- How to train human resources related to energy management is a key challenge for many countries.
- Not only specific technologies but also know-how (knowledge on how to use equipment etc.) plays a key role in improving energy efficiency. While this knowledge is sometimes codified in the form of handbooks and guidance etc, this is often uncoded.
- Many countries have already had good experience in policies and industries relevant to energy management and energy managers. We should try to learn much from each experiences!
- Therefore, it is important to establish interconnecting 2 networks of major actors; one of policy makers and the other of industry practitioners who are responsible for energy management.

(1) Information sharing

➤ Following EMAK participants discuss what effort were done and what are the best practice policy about state of energy management system in each country/region.

- Government officials,
- Experts from the existing international/national institutions for energy management, or
- Experts of energy management schemes,
- Industry representatives, etc.

(2) Network building

➤ Communication network for information sharing such as web-site or email.

(3) Supporting Implementation

➤ Information of integrated methodologies and update of such methodologies.

Purpose of this Webinar

- to introduce IEA's Policy Pathways on Energy Management which focuses on policies that stimulate the uptake of energy management system in industry
- to share outcomes of three EMAK Workshops.
- to discuss about future EMAK activities.
