

# Summary from yesterday

New challenges

New developments

Lots of different  
test procedures

Insufficient  
data

Divergent  
definitions

Divergent  
policies

Hordes of  
standards

# However:

- The network IS our friend
- Isolating **complexity** while finding ways of starting to deal more **comprehensively** with systems
- Specialised issues need specialised approaches
- There are opportunities to better coordinate (at earlier stages) in standards development and policy development
- Not new things BUT actions that leverage
- Build on existing work and efforts
- Energy efficiency IS our friend
- There are a lot of opportunities to promote energy efficiency

# Continued discussion

- **Practical steps and actions forward**
- **Importance of international multi-stakeholder cooperation – how can we ensure sustained activities and who can do what to lead and support this?**
- **What are the 4 key messages for the broader discussion in the afternoon?**
