

The “Guidance Document” for integrating carbon pricing with existing energy policies

Takashi Hattori
Head of Environment and Climate Change Unit
International Energy Agency

**International
Energy Agency**

Objective:

Practical, easily-accessible guide that

- alerts policy-makers to key issues of policy integration that could arise when a carbon price is introduced.
- Provides options for managing these issues, based on real-world experience in other jurisdictions.

Structure:

- Introduction (based on “Summing up the Parts”)
- “Key questions” to consider, with discussion and options to address them, covering:
 - ◆ Policy package elements
 - Policy mapping
 - Energy efficiency
 - Technology deployment policies
 - Supporting policies
 - Details of the carbon price policy
 - ◆ Initial policy alignment
 - ◆ Designing the package to maintain alignment over time
 - ◆ Policy reviews
 - ◆ Institutional issues of policy alignment
- Conclusions

Process:

- Information from today's workshop, plus Chile and South Africa studies will inform document
- Draft Guidelines Document available for review end of March (please comment if you can!)
- Your comments would be appreciated NOW on
 - ◆ Overall approach – are there other ways to be more useful?
 - ◆ Key questions that need to be included

Thank You
