

# InterEnerStat 2015 Conclusions

Duncan Millard  
Chief Statistician  
International Energy Agency

# Common challenges

- Increasing demand for energy statistics covering more areas
- Market and policy changes
- Energy sources and use more diverse so more measurement issues
- Rely on data provided by our members
- Limited resources for statistics in members and organisations
- Confidentiality
- Cooperation of business

# Common solutions

- Importance of training and capacity building
- Shared training (eg JODI)
- Manuals and guidance
- Common definitions
- Improved dissemination
- Engagement with users
- Maximising use of existing resources

# Conclusions

- Oslo group – next round of work for members will be made available through UN unite connections – password etc to be issued.
- CCSA – IEA to explore membership/observer status to represent InterEnerStat members
- SDG – UNSD to pass to IEA for circulation to InterEnerStat new proposals for section 7 indicators.
  - Organisations to make members aware so they can raise issues with their national co-ordinating authority
  - IEA to attend or brief OECD colleagues
- IEA will recirculate to all the draft updated ESM
- Organisations to contact members to identify cases to be raised for classification changes to SIEC, HS, CPC and to send to UNSD by spring 2016.

# Conclusions

- IRES – aim is to have finalised and published by end year, drafting comments only to UNSD by mid-Oct
  - Organisations to make members aware of release in 2016 and conduct review of use in 2017
- Measurement issues – Organisations to consider improved definitions of why measurement is done. Consideration to be given in IRES update to “accounting” rather than “efficiency”. Statistics to be engaged on policy issues where definitions are key. Measurement better than standard factors modelling. Boundary issues to be discussed as part of IRES review.
- Organisations to work together to produce a short summary document that all can publish on own websites, explaining the differences vs IRES for own presentation of balances. IEA will speak to Olade and produce initial draft.

# Conclusions

- Organisations to share information on general sources of data
- Organisations to hold a meeting in 2016 with focus on energy efficiency / end-use data – IEA to circulate draft plan / proposed areas for discussion
- Explore potential for setting up a shared energy statistics resource center – IEA to follow up with Organisations with request for opinions on what areas would add more value

# Conclusions

- All presentations will be circulated to all InterEnerStat members, seeking input from those not able to attend.
- A note of meeting to be produce by end Oct (hopefully sooner)
- Presenters to confirm if OK to put presentations as PDF's on InterEnerStat page on website

# 2 days in Paris

Enjoy any free time you have in Paris and thanks for your input
