

International  
Energy Agency

Secure • Sustainable • Together

# Workshop on 21<sup>st</sup> Century Standards – Overview and objectives

[www.iea.org](http://www.iea.org)

*Vida Rozite*  
*Energy Efficiency Unit*

# Scope for new approaches and opportunities

EESL programmes in 80 countries, covering 50 products

- instrumental in achieving energy savings
- but new opportunities that can make programmes more effective are not exploited

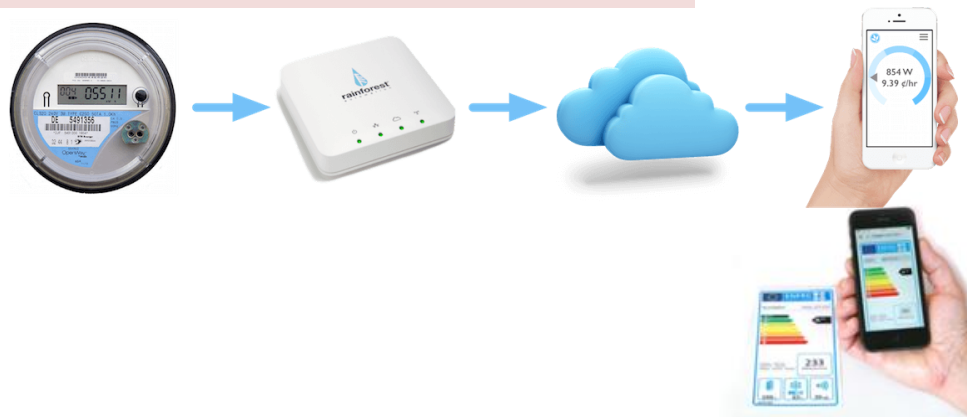

## Traditional EESL Programmes

- Updating is slow
- Gathering data is costly
- Usage patterns get outdated
- Compliance is difficult
- Labels provide limited information

## ICT offers

- Product registries
- Access to sales data
- Real time energy use data
- Better labels
- Apps for consumers

1

### CHECK

Check if your product is regulated and what your legal obligations are.

2

### TEST

Test your product if required, or obtain test results from the manufacturer.

3

### APPLY

Complete the registration application online.

4

### CONFIRM

You should receive notification of the Regulator's decision within 28 days.

# ICT can help ensure better programmes

<b>Gathering data</b>	Sales, stocks, usage patterns, energy use
<b>Analysing data</b>	Trends, policy impact, market changes, energy savings
<b>Developing energy efficiency standards and labels</b>	How can we save time and resources? How can we streamline? Evaluating impact
<b>Registering products</b>	Transparency, streamlining processes, information for consumers
<b>Compliance</b>	Reducing costs, improving compliance, more effective compliance checks
<b>Consumers</b>	Providing information when needed in an accessible format, engaging consumers

# **Session 1: International Experience with product databases**

# Energy Efficient Product Databases: The Opportunities

Front end

Improving information  
for consumers

- Labelling + scheme: allows for more temporal, regional and other specificity
- Potentially allows for more effective behavioral cues
- Aligned with “big data” opportunities
- Decentralized potential if open for 3<sup>rd</sup> party development
- Can help to integrate an EE policy framework – provide information on incentives

Back-end

Assisting regulatory  
process for products

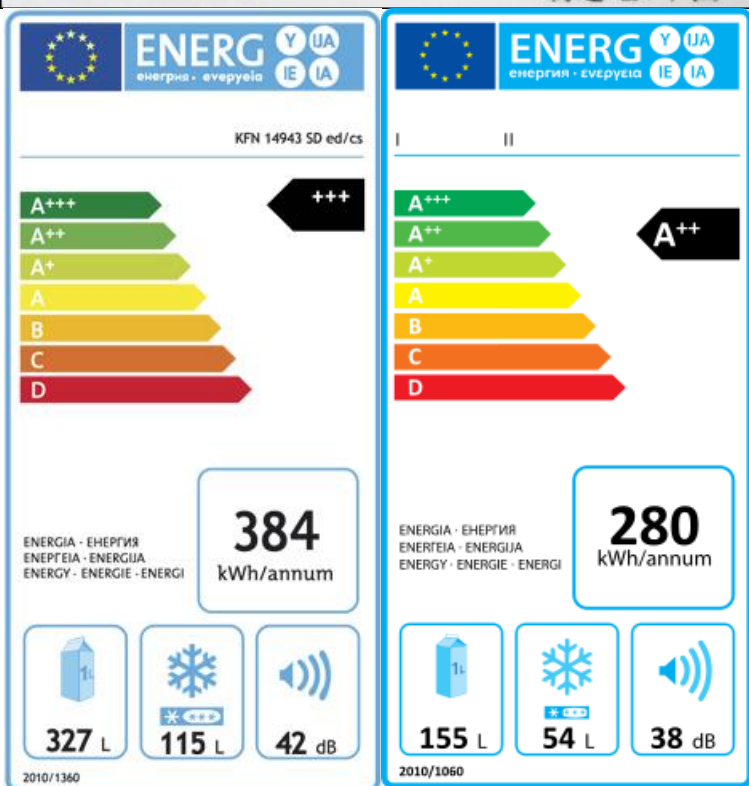

- Simpler product entry and management
- Easier to identify reporting errors and persistency
- Potential for alignment on product testing
- Facilitates checking compliance
- Facilitates development of future standards and policy
- Works to integrate other EE framework policy

# **Session 2: Technologies to help inform and engage consumers**

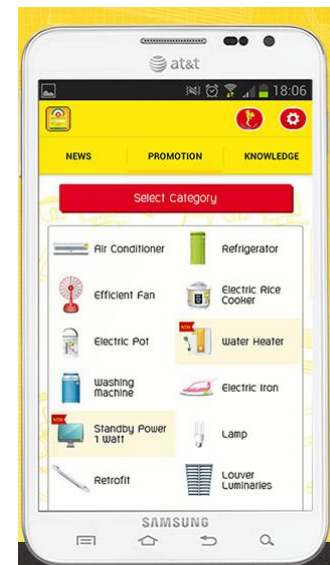

# It is not easy being an energy efficient consumer...

MODEL (型号): D275P-00  
REF.NO: DPS-275CB-1 A REV(版本): 00  
INPUT (输入) 100-120V ~ / 6A, 200-240V ~ / 3A,  
47Hz-63Hz 输出  
OUTPUT (输出) +12V == / 17A, -12V == / 0.5A,  
MAX POWER 275W +5V == / 18A, +5VSB == / 4A,  
+3.3V == / 5A,  
MAX. COMBINED POWER ON +5V & +3.3V OUTPUT IS 106W  
+5V & +3.3V 最大输出 106W  
+5V & +3.3V 最大输出 106W  
DATE CODE: 0729 製造地: 中國  
制造地: 中国

- Finding the right information
- Finding the label
- Understanding the label
- Using it to make an energy efficient choice

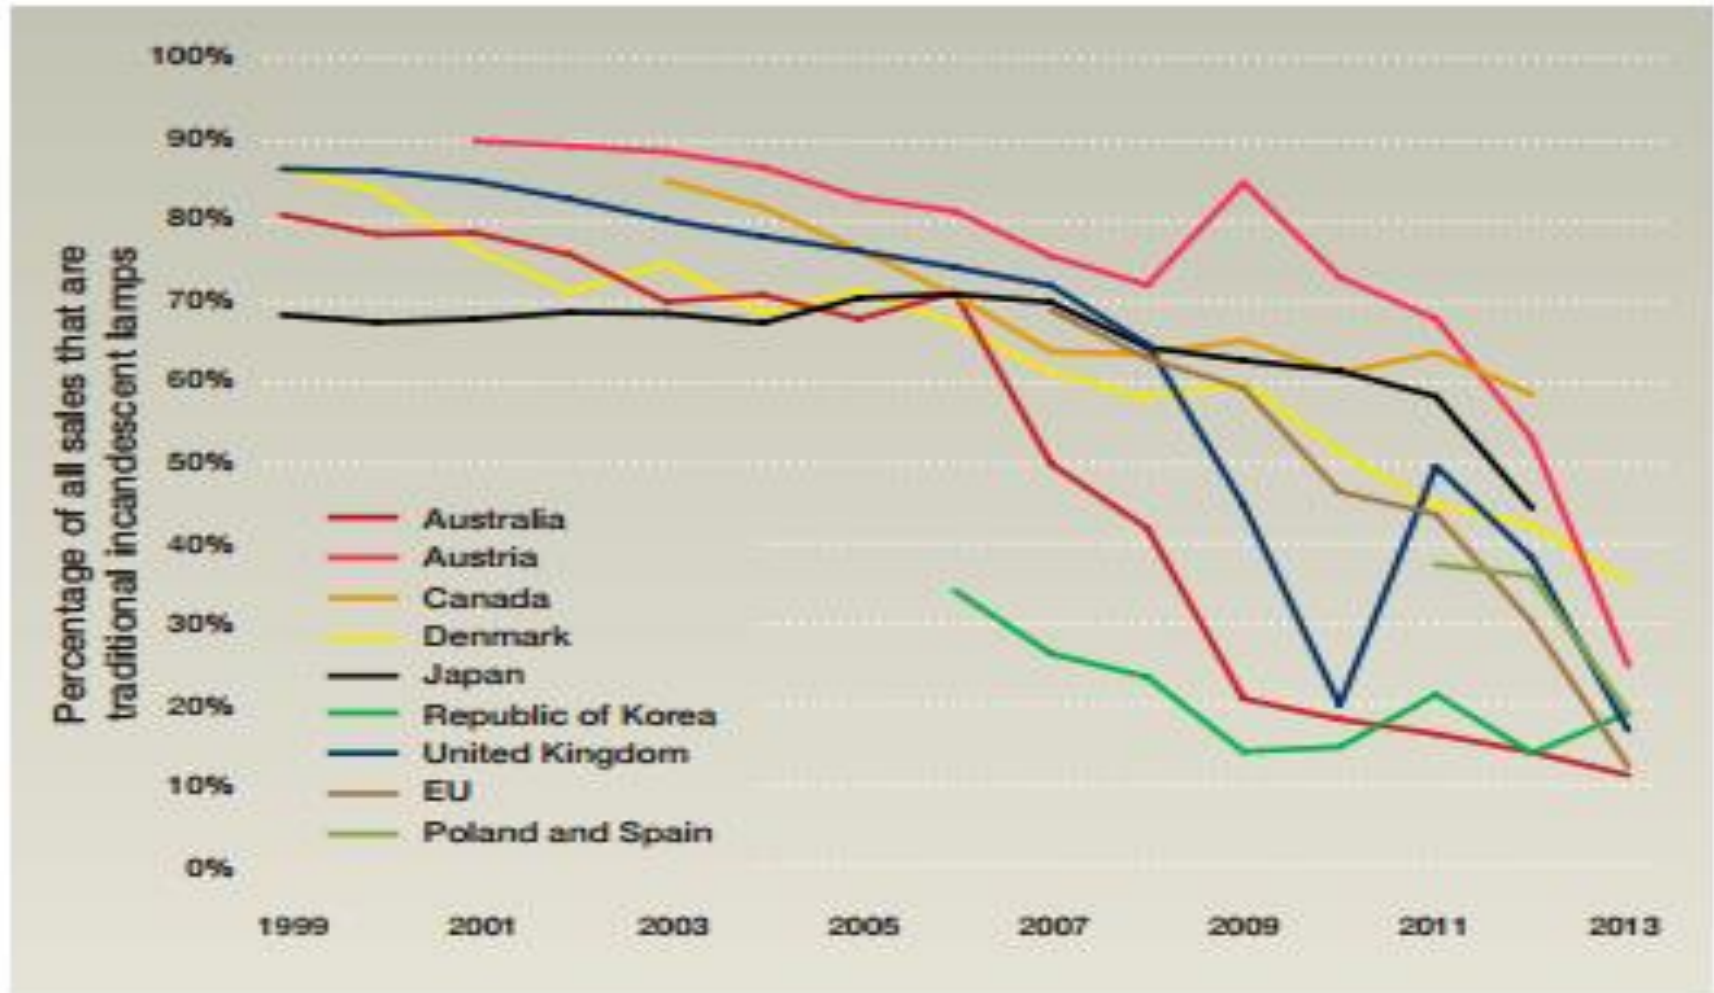

# Helping consumers

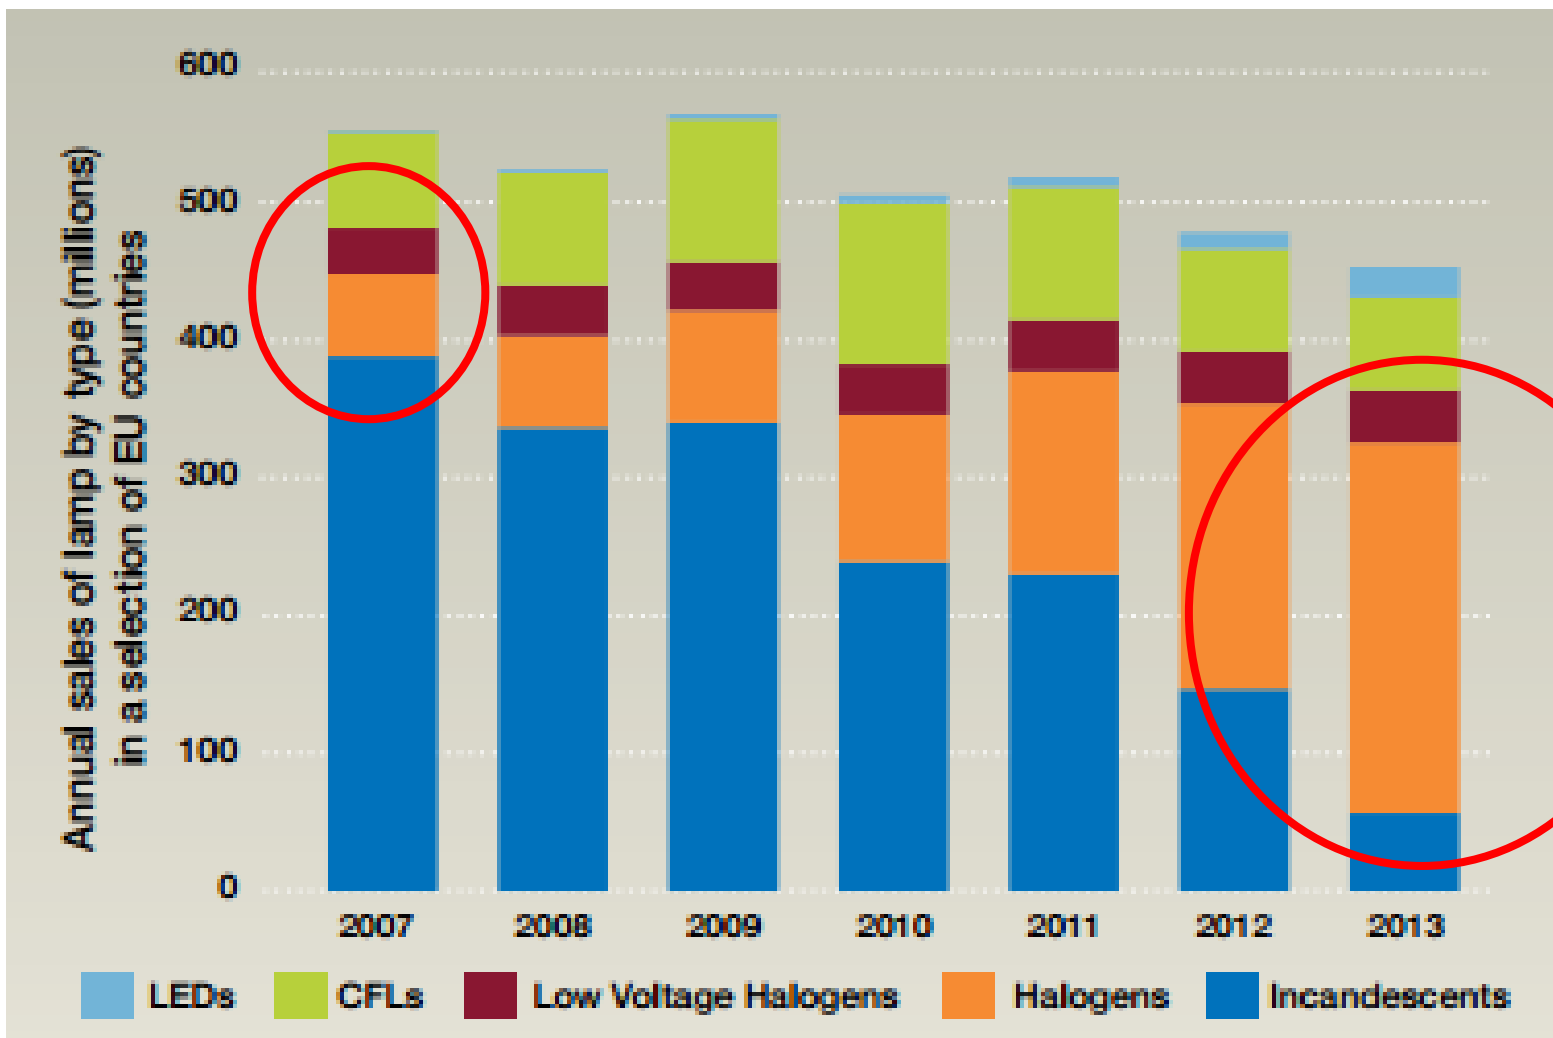

- How to engage users?
- What information do they need to make energy efficient decisions?
- Can these approaches also help data collection efforts?
- Can they promote compliance or facilitate compliance checking?

# **Session 3: New technologies to improve energy efficiency standards and labels programmes (focus on data)**

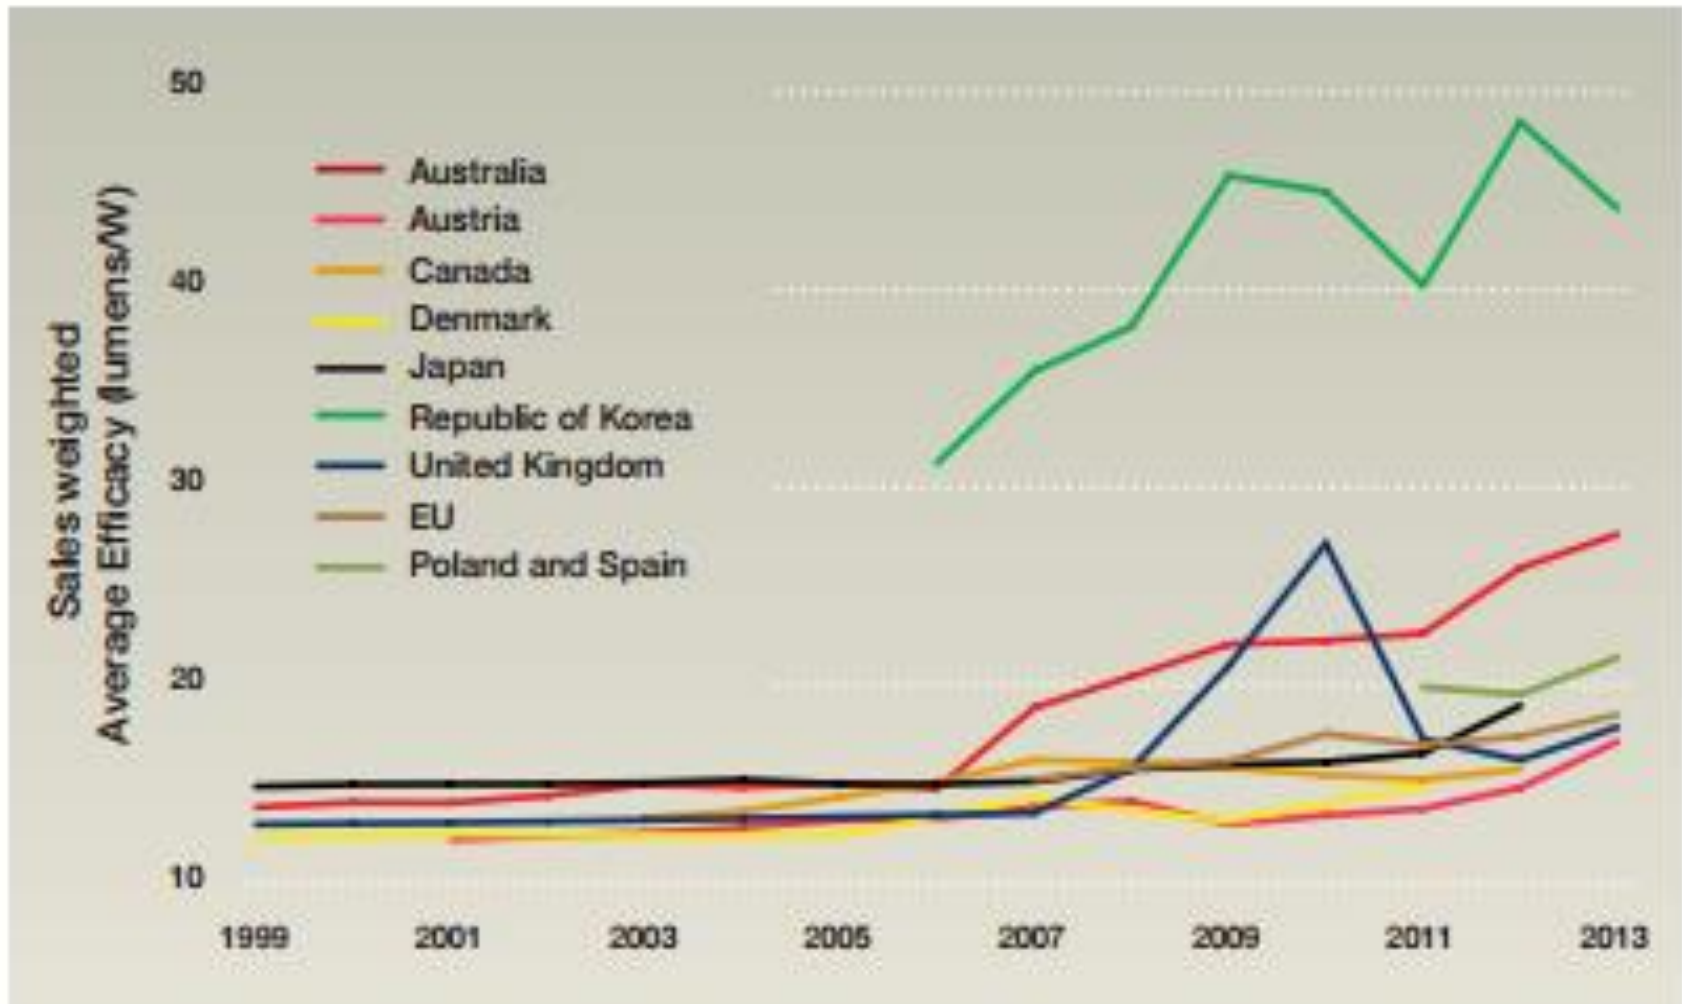

# Standards & labels are effective

# But what actually happened?

# Better data shows actual impact

4E 2015

# Getting and analysing data

- **More data = more opportunities**
- **Crawling/scavenging (sales)**
- **Accessing metered data**
- **Converting metering data into useful data (energy use and usage patterns)**
- **Getting devices to report data (energy use and usage patterns)**
- **Data sharing?**

# **Session 4: Using new approaches and technologies for developing and evaluating programmes (panel discussion)**

# Panel discussion – reflecting on topics covered at the workshop

- Sweden
- Thailand
- Ukraine
- Mexico
- Netherlands
- South Africa
- Brazil
- European commission

We could share data

We are planning an evaluation next year

It would be good to have mechanisms to exchange information

Could initiate a joint project?

Data crawling sounds interesting

There are better ways of accessing data

We are considering QR codes

More research is needed

What about data on commercial equipment?

# **Session 5: Moving forward (scope and opportunities for cooperation and next steps)**

# Opportunities for cooperation

## Where is there scope for cooperating?

- Exchange of experience
- Sharing methodologies/approaches
- Sharing data
- Joint projects

## What roles could different organisations play?

IEA – SEAD – 4E – U4E – others?

Next steps? Needs? Gaps? Project ideas?

# Practical matters

- Coffee breaks
- No cups in the room!
- Large bags in the cloak room downstairs
- Lunch
- Dinner (who is joining?)
- Fire safety
- WiFi
