Supporting the Lima-Paris Action Agenda
Vision 2050

9 billion people living well within the limits of our planet by mid century

With the goal of limiting global temperature rise to 2°C above preindustrial levels, the world must, by 2020, have energy, industry, agriculture, and forestry systems that simultaneously:

- Meet societal development needs
- Are undergoing the necessary structural transformation to ensure that cumulative net emissions do not exceed one trillion tonnes of carbon
- Are becoming resilient to expected changes in climate.
WBCSD: Scaling up solutions
LCTPi could channel at least $5-10 trillion of investment into the low carbon economy.

LCTPi could support at least 25-45 million person years of employment.

LCTPi could take us 65% of the way to a 2°C emissions pathway.
Leadership beyond COP
