Serving society

Stimulating innovation

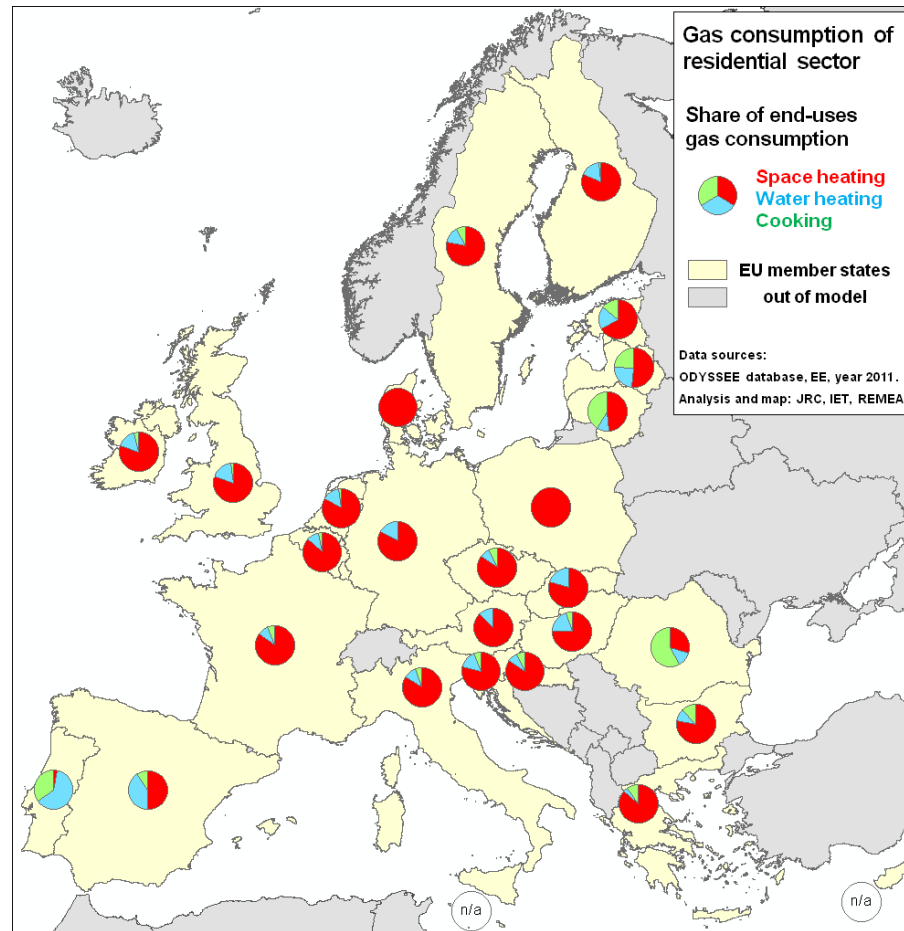

Supporting legislation

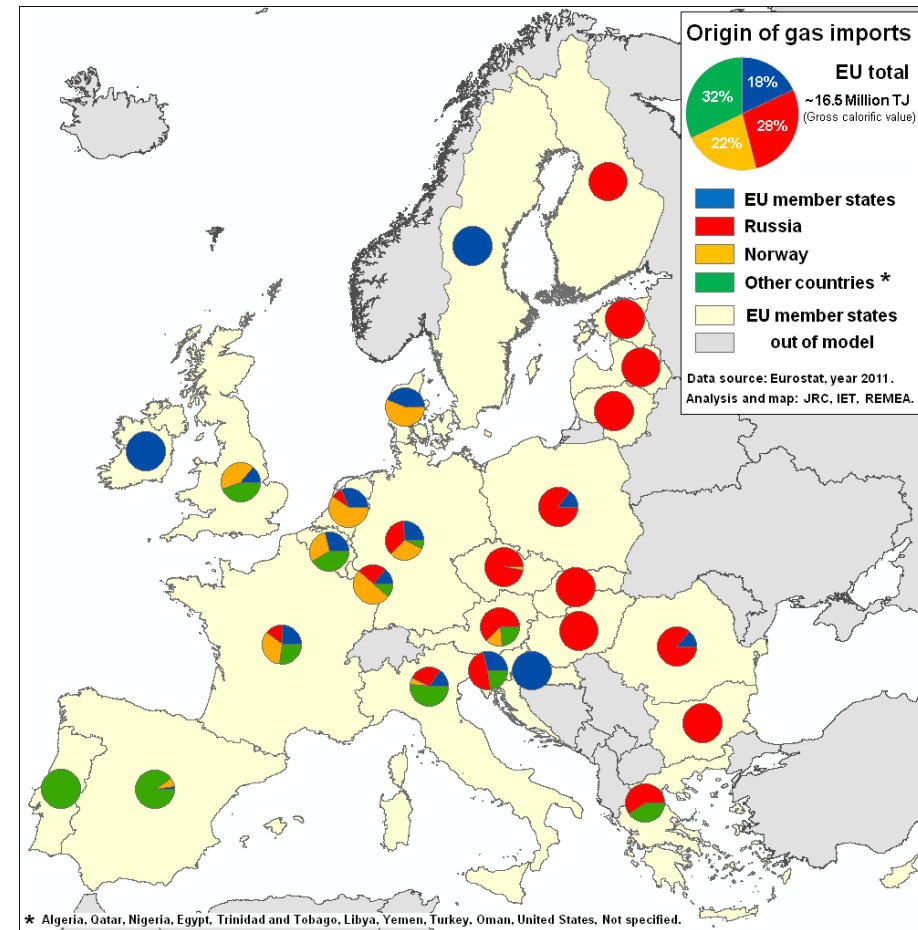

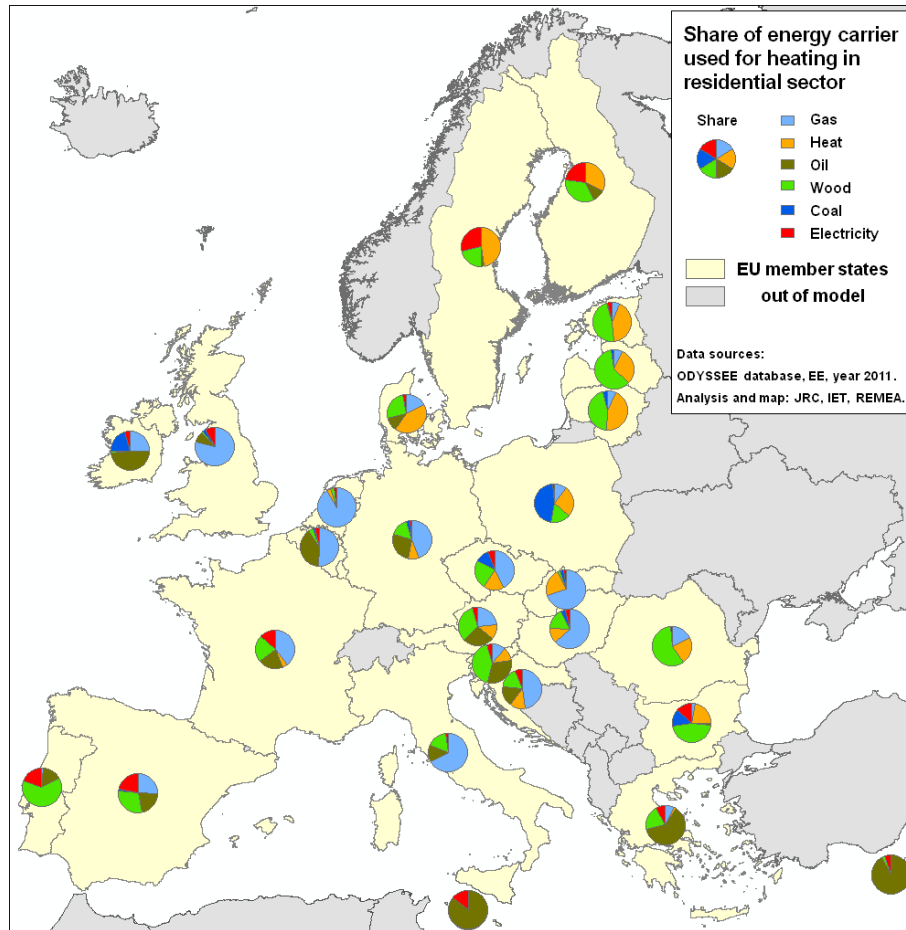

Most of the EU Gas imports is used for buildings

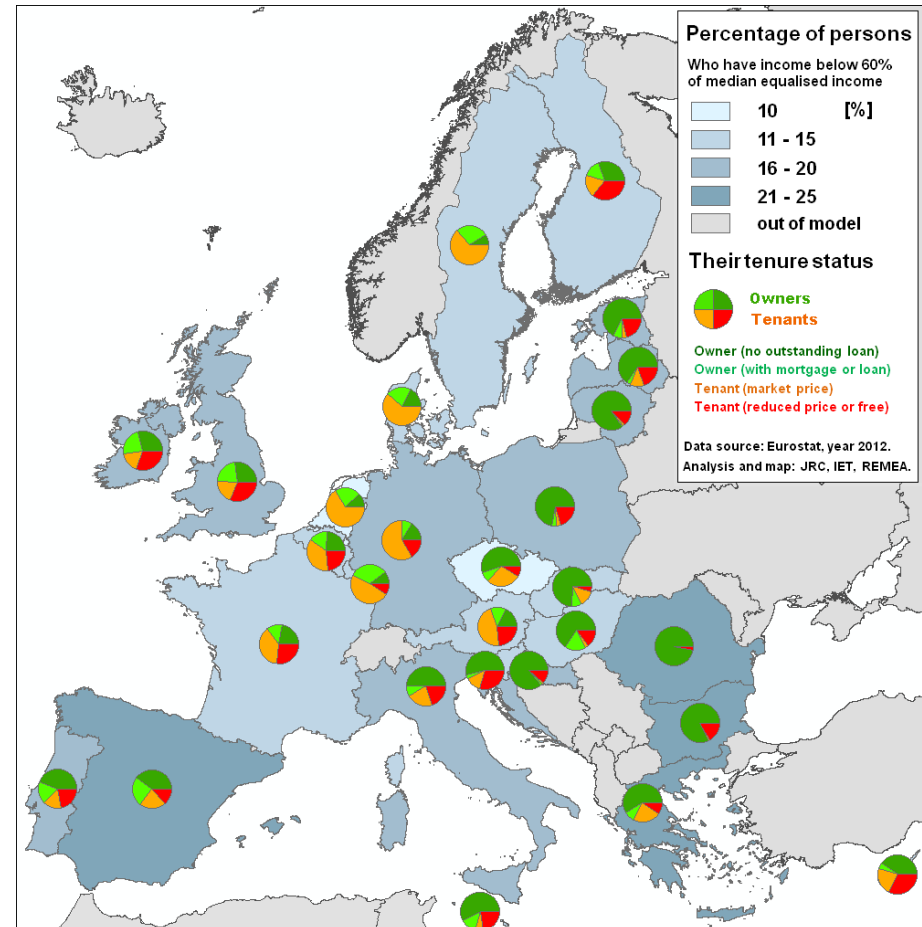

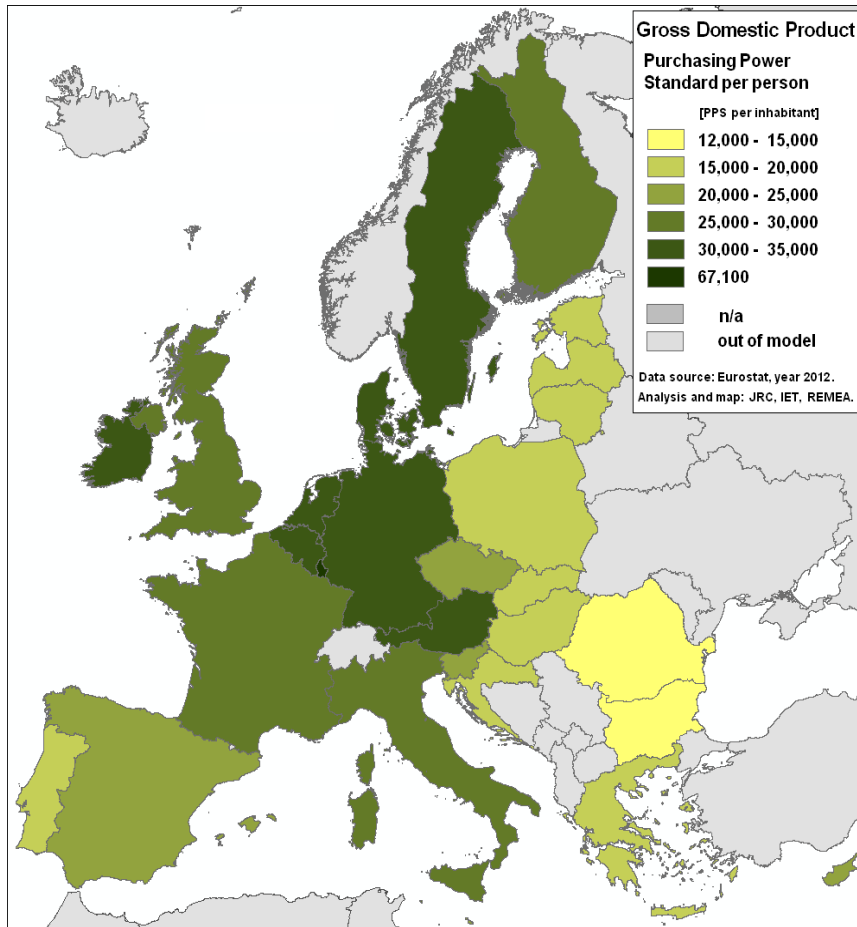

Gas is mainly used for space heating

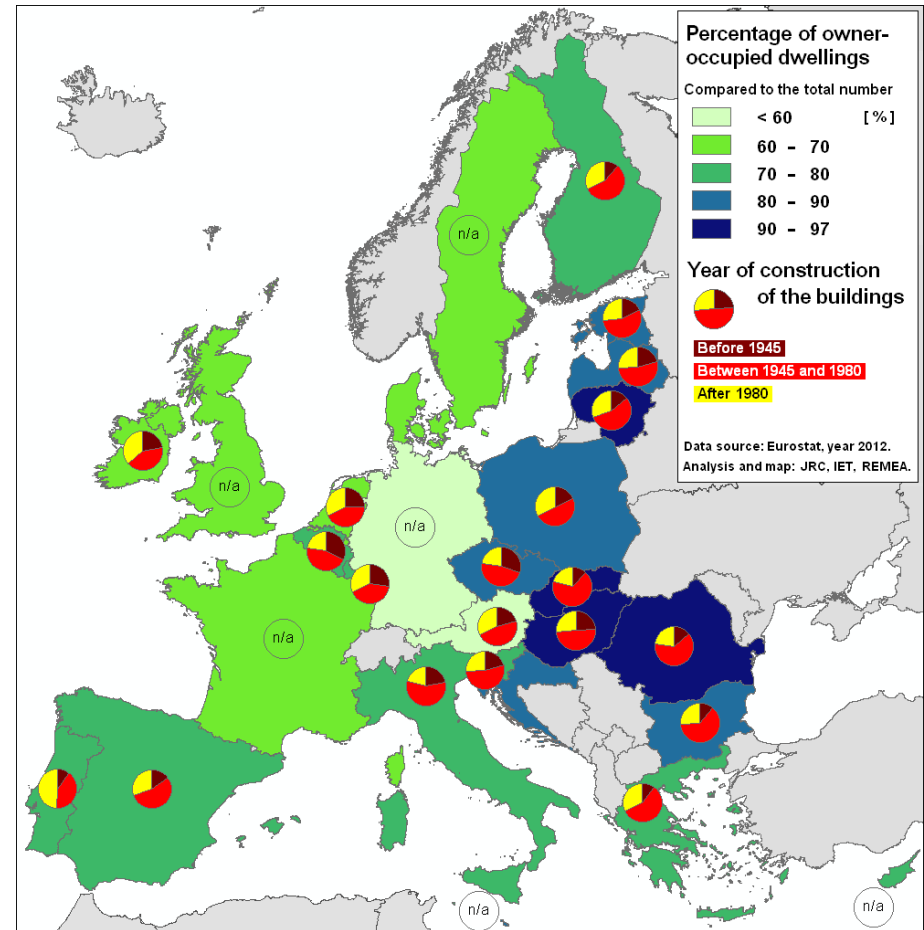

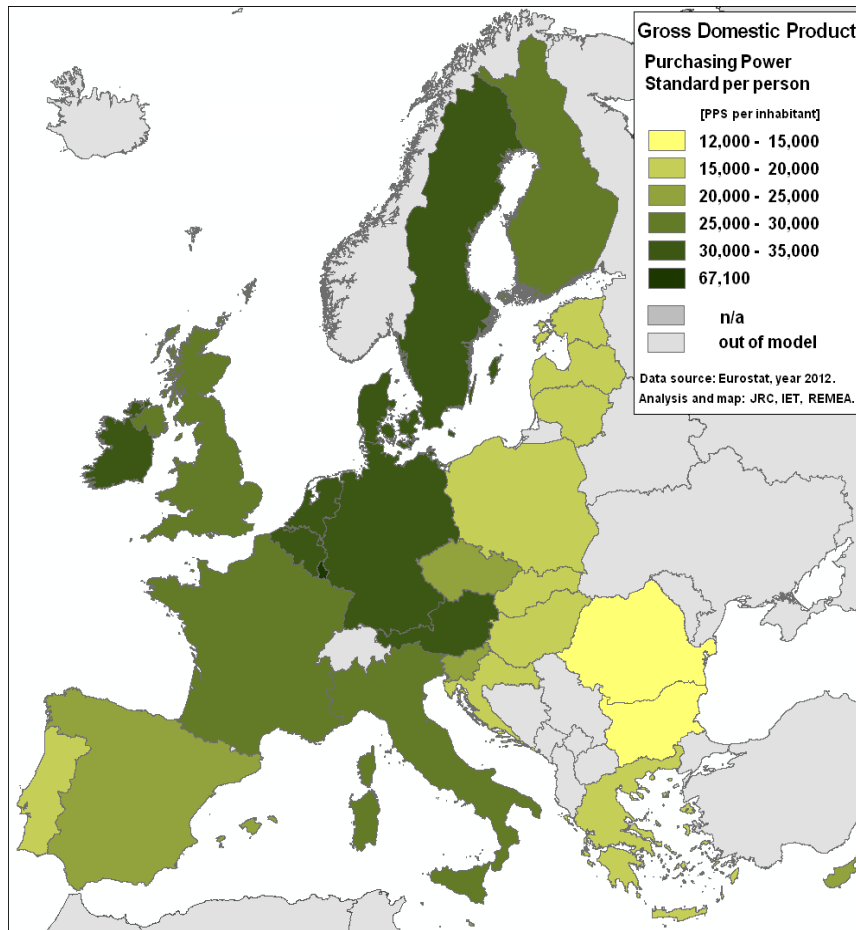

Heating Central and Eastern Europe is highly dependent of Russian gas

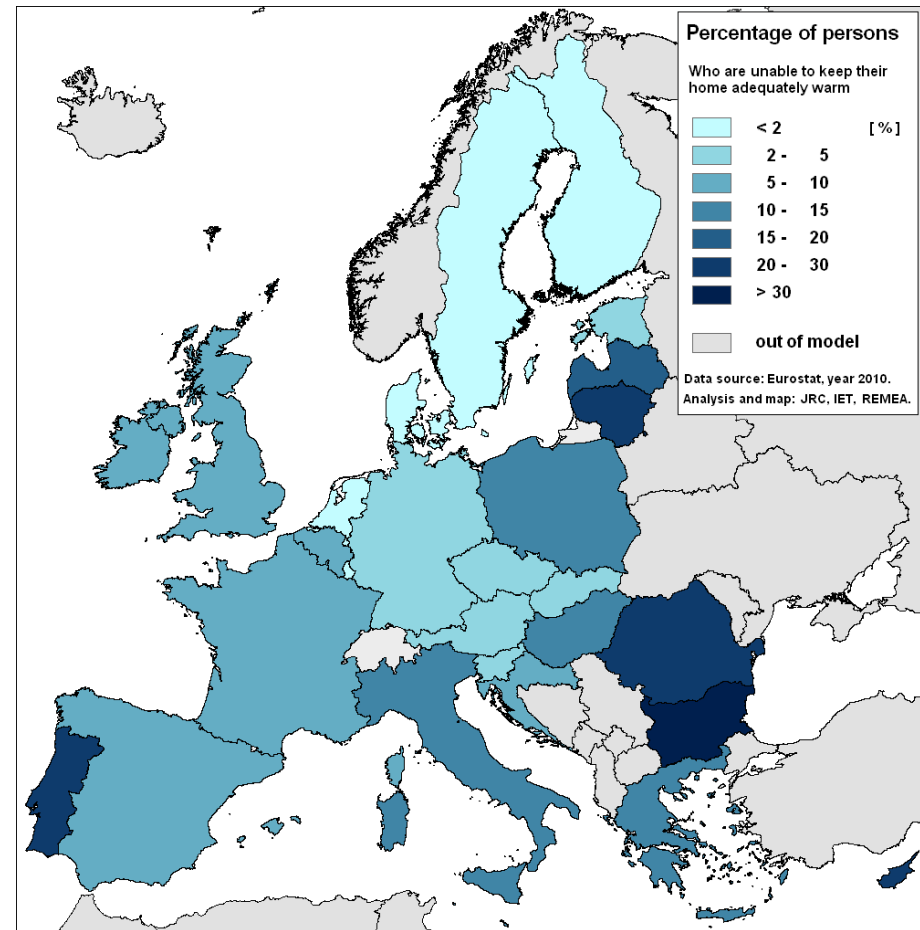

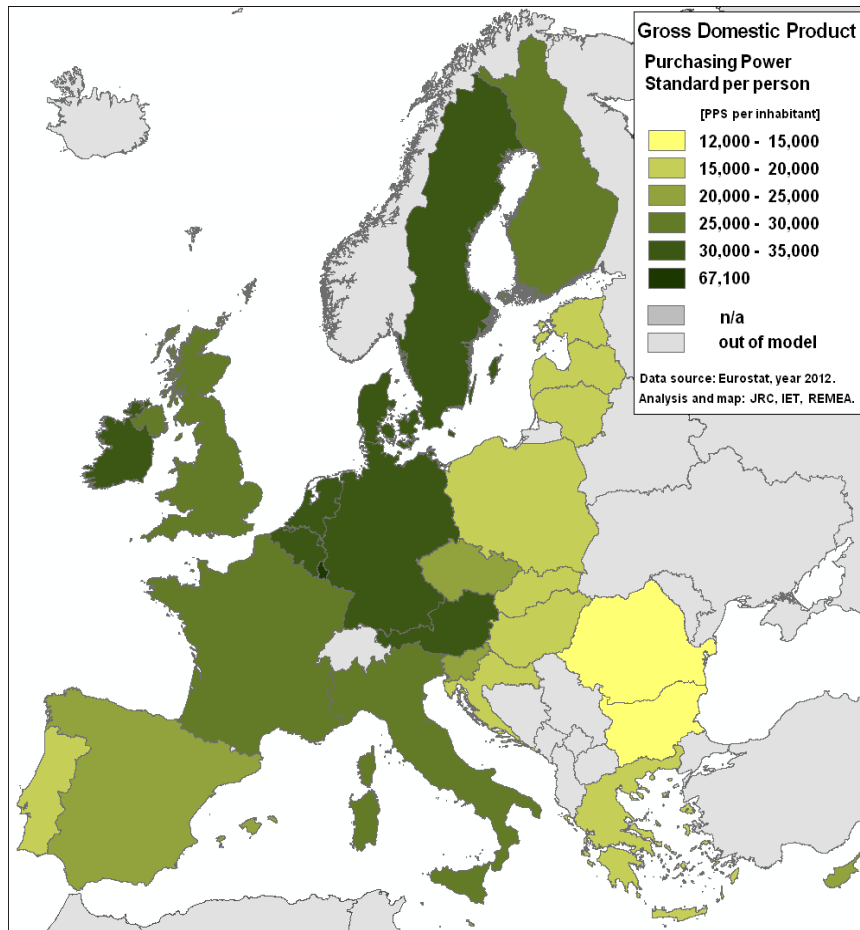

MSs with GDP/capita lower than EU average have the highest share of low-income owners of their buildings

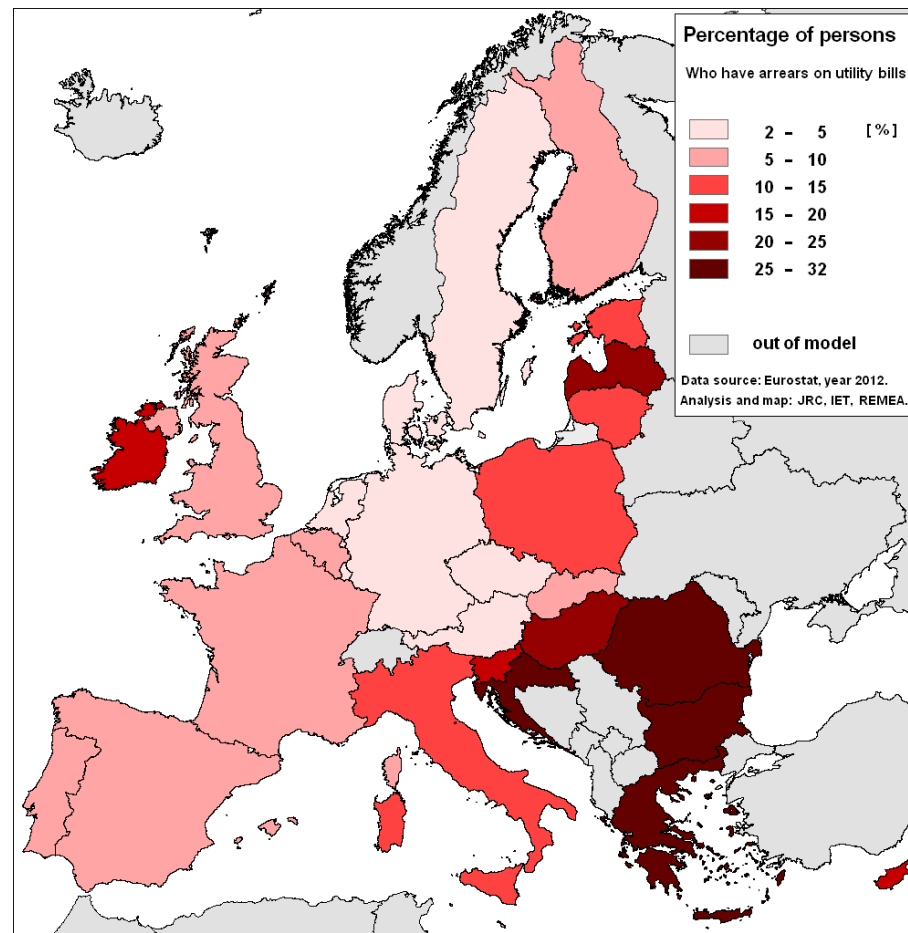

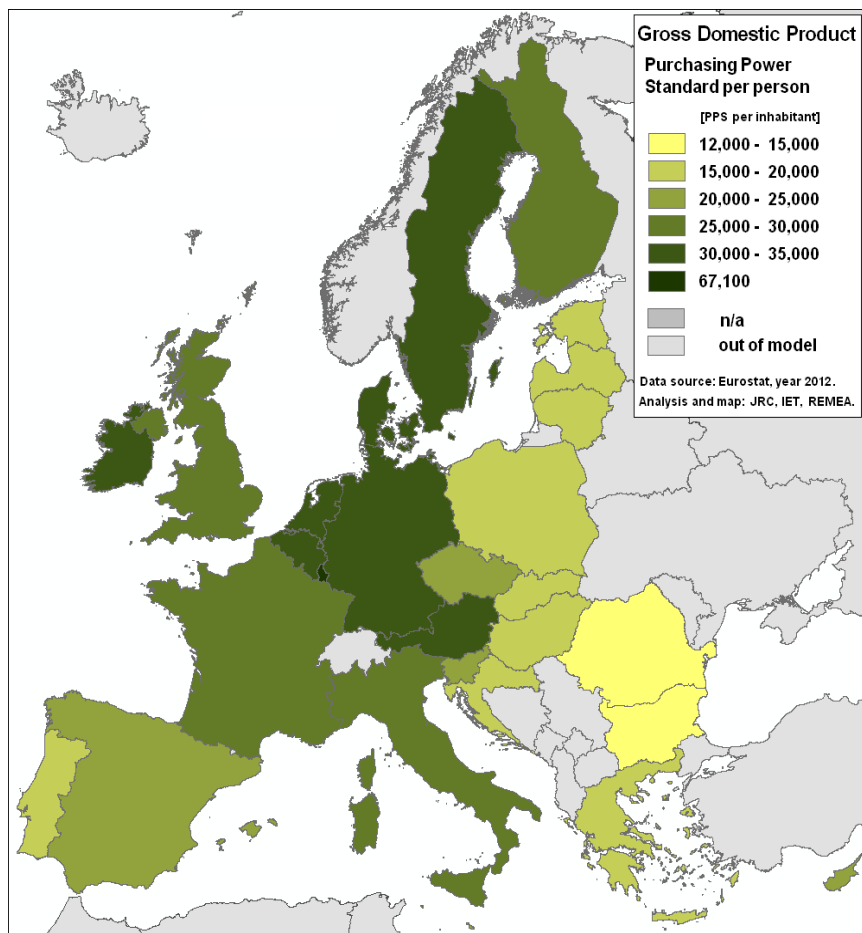

MSs with GDP/capita lower than EU average have the highest share of owned-occupied buildings built 1945-1980

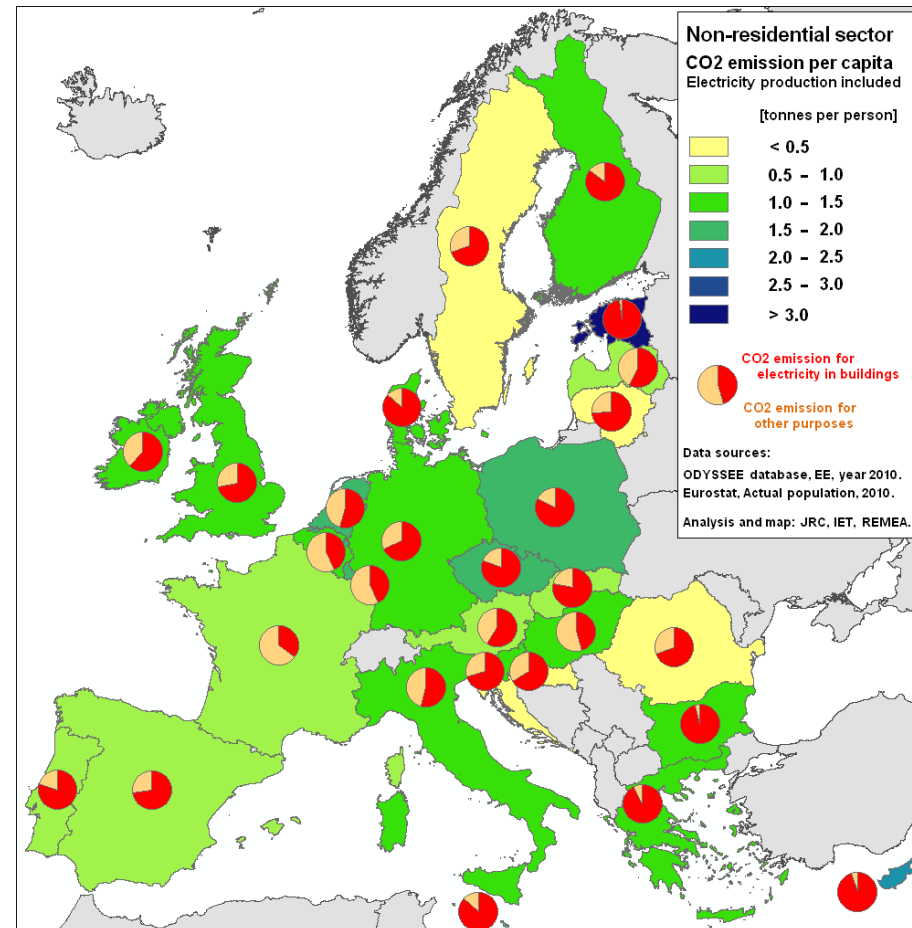

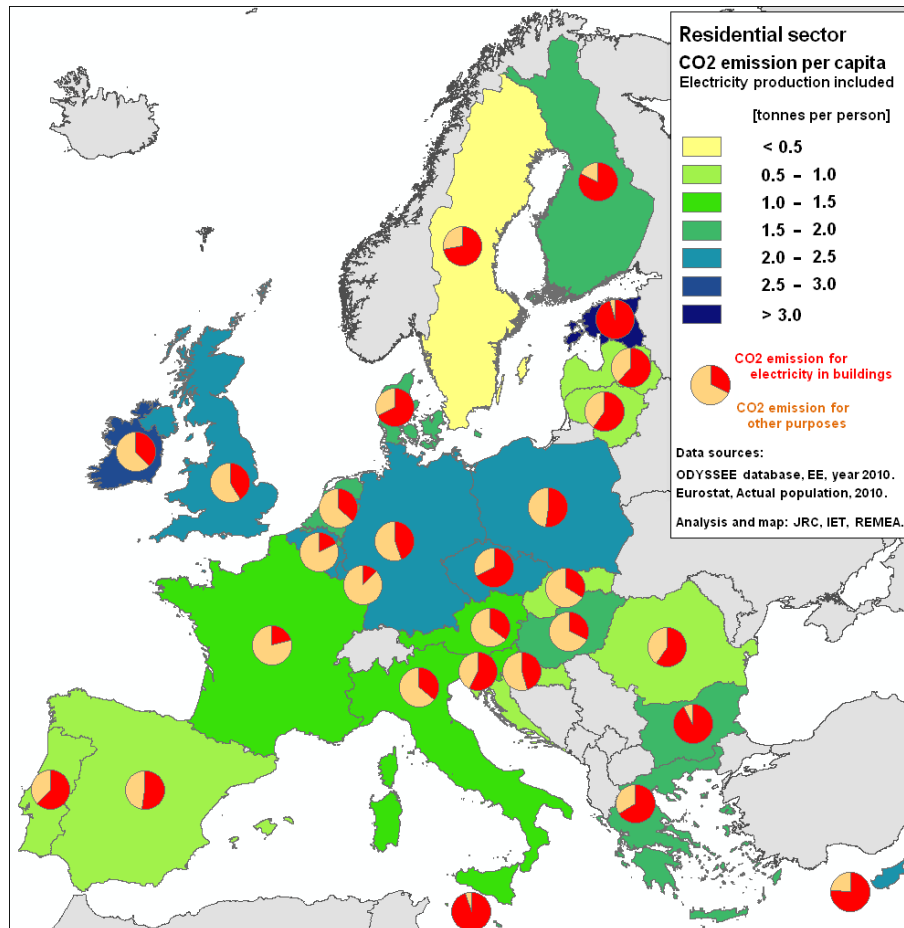

MSs with GDP/capita lower than EU average have the highest share of population facing fuel poverty

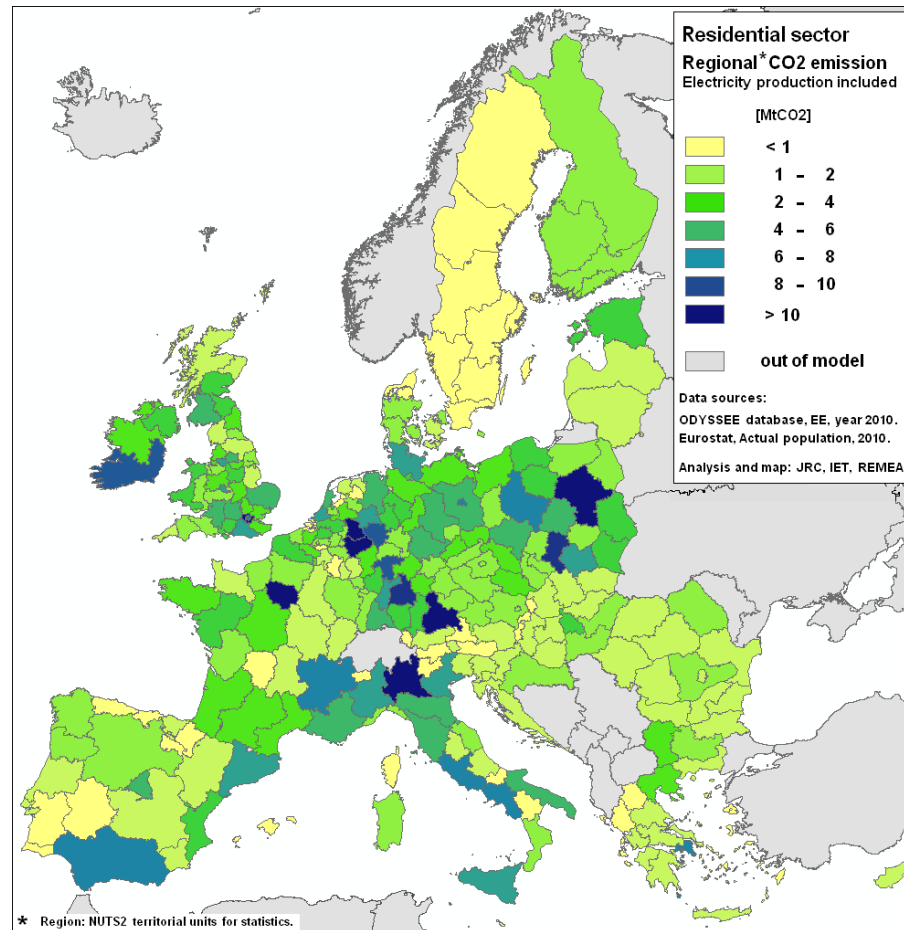

MSs with GDP/capita lower than EU average have the highest share of population facing fuel poverty

Decarbonisation of electricity production is of high importance in MSs with GDP/capita lower than EU average

Cutting CO2 emissions in residential sector requires a regional approach

Thank you for your attention
