Energy Agency**

Information tools

- Policies and measures designed to increase knowledge, awareness and training among relevant stakeholders or the general public
- Existing tools:
 - General information campaigns
 - Targeted training programmes for professionals
 - Labelling schemes:
 - ◆ Provide purchaser with information with information on a products energy usage or emissions

IEA Energy Efficiency Policy Recommendation 9:

Governments should require building energy performance labels or certificates that provide information to owners, buyers and renters.

Analyses of existing labelling schemes

- The implementation of labelling schemes increased the last five years.
- Voluntary schemes often cover other environmental issues too
- Enforcement varies from one country to another
- Do not target all types of buildings
- Difficult to evaluate the impact

Thank you!
